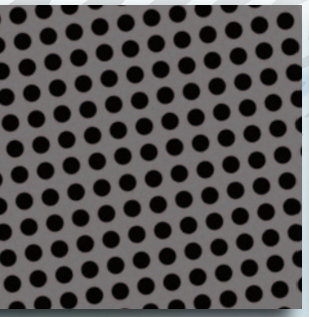
The C-flat™ Family of Holey Carbon, Gold TEM Grids

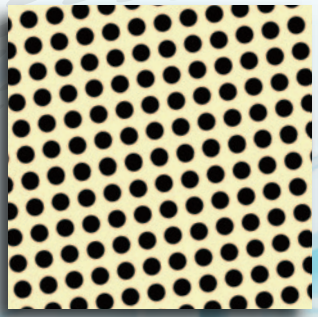
now by EMS...

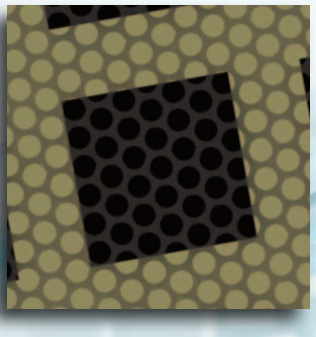
C-flat™ by EMS
in numerous configurations

Au-flat™ by EMS
for high resolution imaging

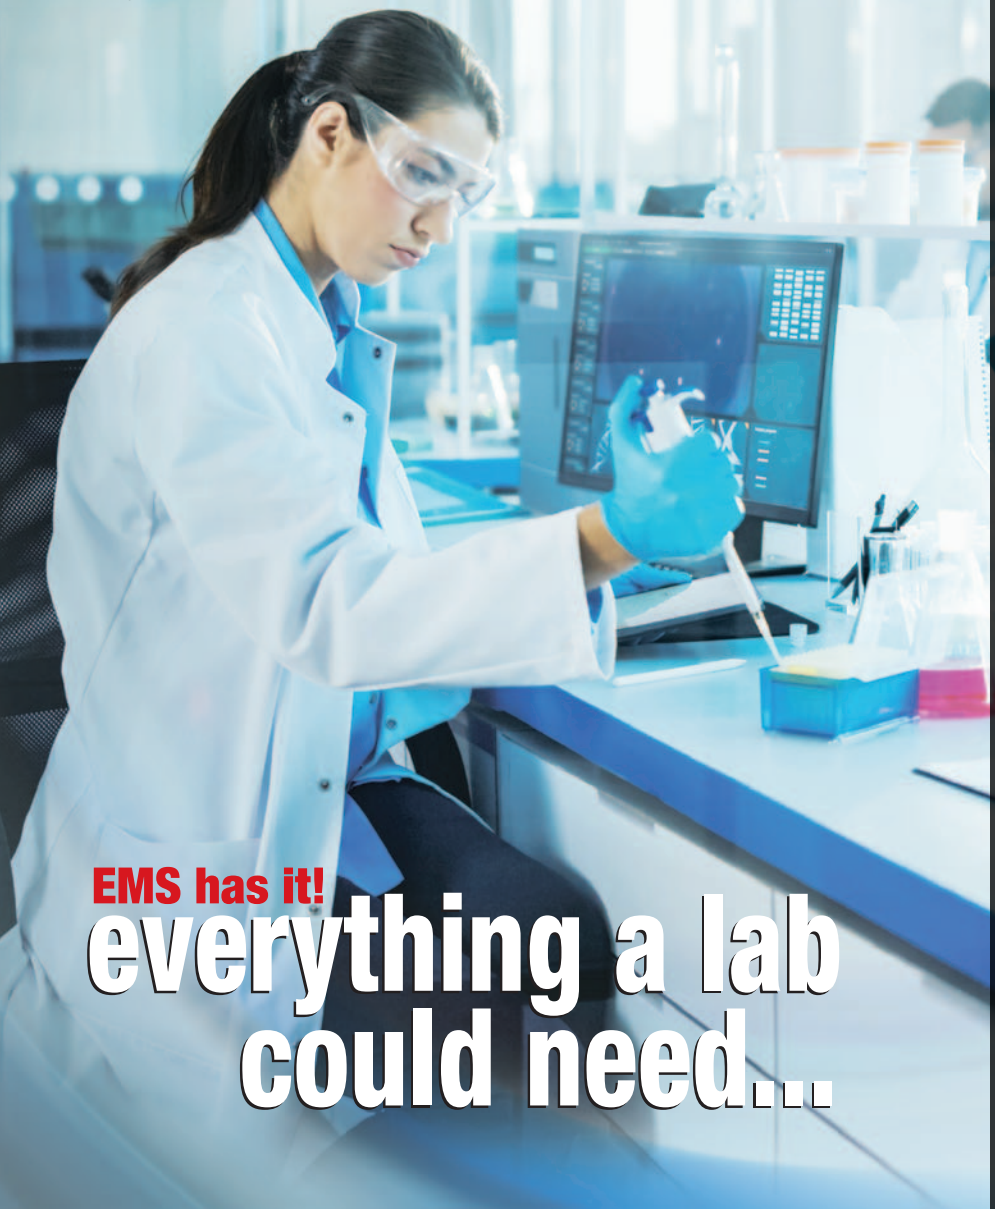
CD-flat™ by EMS
for automated S/TEM imaging and metrology







You can count on the same advantages, the same high quality, and the same product selection that makes the C-flat Family the premier holey carbon/gold grids for S/TEM and Cryo-TEM.



EMS has it!

everything a lab could need...

NIGHTSEA

Fluorescence Viewing Systems

For many years, NIGHTSEA has developed practical and economical solutions for viewing and photographing fluorescence in the lab and in the field. ***Electron Microscopy Sciences is happy to announce that NIGHTSEA is now part of the EMS Family of Companies.***

APPLICATIONS...

- Pre-screening
- Microdissection
- Failure Analysis
- Genotype Sorting
- Forensics

EMS **GRIDS & TEM SUPPORT FILMS CATALOG**

EDITION IV

TABLE OF CONTENTS

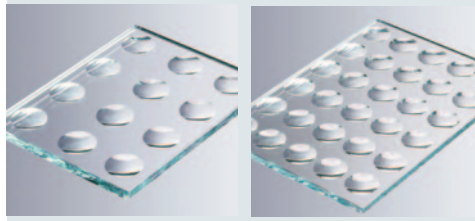
NEW PRODUCTS...

NEW Gilder Parallel Bars, Type GVPB

This new grid provides four levels of parallel bar specimen support. Quandrants are separated by crenelated bars.

See page 5.

Marienfeld Superior™ Staining Plates



Made of float glass, with bevelled edges and polished cavities.

See page 84.

NEW Carb-N-Grids™ 2 & 4 Post 3mm Lift-Out Grids

Durable carbon lift-out grids that facilitate precise Elemental Analysis.

See page 19.

SPECIMEN SUPPORT GRIDS

TECHNICAL TIP

Shiny Side or Rough Side?

Retention of sections on grids during poststaining and immunocytochemical procedures frequently is of crucial importance in the electron microscopy laboratory. Opinions differ regarding the side of grids most suitable for permanent adhesion.

The controversy is easily solved by examination of the surfaces involved. Grids are manufactured with a dull or rough side, and a shiny or smooth side. Epoxy sections exhibit a bumpy surface when viewed in the boat. Scanning electron microscopy images of epoxy sections without embedded material also reveal an uneven surface. Let us imagine a grid to be a single sided piece of sandpaper and the section to be a double sided piece of sandpaper. Sandpaper grips another piece of sandpaper much more readily than it does a smoothly polished metal surface. For the most secure adhesion of sections to grids, **SECTIONS SHOULD BE PICKED UP ON THE ROUGH SIDE OF THE GRID**.

Hildegard H. Crowley, Dept. of Biological Sciences, University of Denver, Denver, CO. 80208

TECHNICAL TIP

A Simple Method for Handling Grids

A simplified method for handling EM grids is described. This new method not only offers safety and identification of your samples but offers you improved handling, temporary storage, and identification of grids bearing ultrathin sections as well as a novel method for preparing bulk samples.

Refer to:
Gorycki, M.(1992). A Simple Method for Handling Grids. Biotechnic & Histochemistry 67/5, 313-314.

TECHNICAL TIP

Reaction of Ni and Cu Grids

How do Nickel and Copper Grids react with Periodic Acid?

Periodic Acid + Ni... Ni-Periodate + H_2
Periodic Acid + Cu... Cu-Periodate + H_2

In this case you should use Gold Grids.

EMS Grids, Molybdenum Grids

EMS Grids — Square Mesh and Oval Hole

Diameter: 3.05mm, **Thickness:** see chart

TEM Specimen Supports in Molybdenum

We have extended our range of TEM grid materials to include four types, which are now available in Molybdenum. The new products are manufactured using a process known as chemical 'milling' (etching) instead of the more familiar technique of 'electroforming' (deposition) that is used in the manufacture of copper, nickel and gold products. Molybdenum is used principally in applications where it's high temperature, hardness, expansion of coefficient and corrosion resistance characteristics are considered important. The material which is used has a purity of 99.9%.

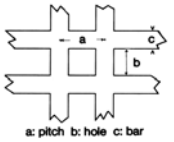
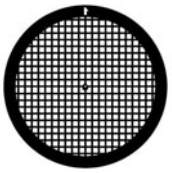
Gilder Grids

A reliable support specimen grid source. Features well-defined grid bars, maximum open area, and a matt/shiny side. Each grid is individually inspected. Newly introduced are copper grids with palladium plating. This plating offers better grid strength and avoids tarnishing.



Gilder Standard Square Mesh

Diameter: 3.05mm
Thickness: 0.7 mil (18µm)
Material: Copper (Cu), Nickel (Ni), Gold (Au), Copper/Palladium (Cu/Pd=CP), Molybdenum (Mo)



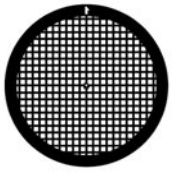
G200

G200TH

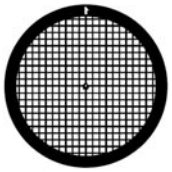
A thickened version of the standard, G200TH with an assymetric center. A mark on the rim allows for precise orientation of the grids.

G200TT

A combination of thin and thick bar grids, with a mark on the rim for orientation.



G200TH



G200TT

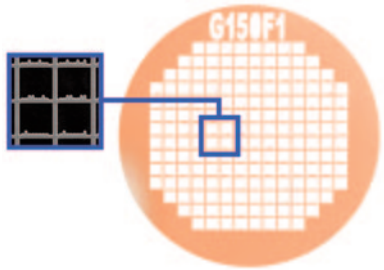
SPECIMEN SUPPORT GRIDS

Gilder Grids (continued)

Gilder Finder Grids

G150F1 Gilder Finder Grid



This grid has 172 complete square cells and each cell is identified by an 8 bit base 2 binary number symbol representation. 0 is represented by a short rounded pillar. There is no zero cell.

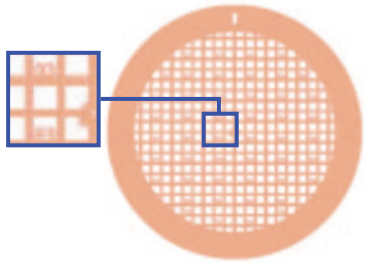
The first cell located at top left is binary 1, digit 1 is represented by a long pillar at the extreme right position on the bottom horizontal line of cell one: each individual subsequent cell is then easily identified. Lines/Inch ~150.

Diameter: 3.05mm, **Thickness:** 0.7 mil (18µm)
Material: Copper (Cu), Nickel (Ni), Gold (Au)

TECHNICAL DATA

Type	Cat#	Packed	Pitch (µm)	Hole (µm)	Bar (µm)
150 mesh	**G150F1-Cu**	100/vial	165 ± 0.5	~140 variable	~25 variable
	G150F1-Ni	100/vial	165 ± 0.5	140 variable	~25 variable
	G150F1-Au	50/vial	165 ± 0.5	140 variable	~25 variable

G200F1 Gilder Finder Grid



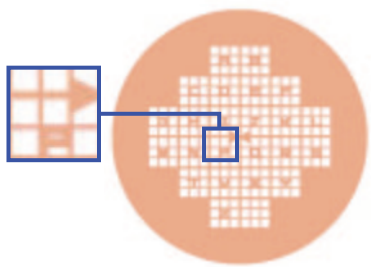
Thick bars divide regions into 6 thin bar areas, which are identified by a numeric system.

Diameter: 3.05mm,
Thickness: 0.7 mil (18µm)
Material: Copper (Cu), Nickel (Ni), Gold (Au), Copper/Palladium (Cu/Pd=CP)

TECHNICAL DATA

Type	Cat#	Packed	Pitch (µm)	Hole (µm)	Bar (µm)
200 mesh	**G200F1-Cu**	100/vial	125	90–100	35-12
	G200F1-Ni	100/vial	125	90–100	35-12
	G200F1-CP	100/vial	125	90–100	35-12
	G200F1-Au	50/vial	125	90–100	35-12

G200F2 Gilder Finder Grid



Thick bars divide regions into 9 thin bar areas, which are identified by alphabetical letters located in the center of the grid.

Diameter: 3.05mm,
Thickness: 0.7 mil (18µm)
Material: Copper (Cu), Nickel (Ni), Gold (Au), Copper/Palladium (Cu/Pd=CP)

TECHNICAL DATA

Type	Cat#	Packed	Pitch (µm)	Hole (µm)	Bar (µm)
200 mesh	**G200F2-Cu**	100/vial	125	106	25-12
	G200F2-Ni	100/vial	125	106	25-12

Gilder Parallel Bars, Type GVPB

NEW

This new grid provides four levels of parallel bar specimen support. Quandrants are separated by crenelated bars. Larger areas may be viewed at lower magnification, depending on the appropriate specimen thickness.

Quandrant	1	2	3	4
Lines/Inch	~100	~200	~200	~400
Pitch (± 0.5µ)	~250µm	~120µm	~83µm	~62µm
Bar Width	~65µm	~45µm	~40µm	~35µm
Hole Width	~185µm	~80µm	~43µm	~27µm

Type	Cat#	Packed	Description
GVPB	**G-GVPB-Cu**	100/vial	Parallel Bars, 4-Quandrant
	G-GVPB-Ni	100/vial	Parallel Bars, 4-Quandrant
	G-GVPB-Au	50/vial	Parallel Bars, 4-Quandrant

Gilder High Mesh Values

There is increasing interest in the use of high mesh value TEM specimen support grids in life science, materials sciences, semiconductor and nanotechnology. We introduce three new products designed to improve support for thin specimens and membranes. These have a high hole/bar ratios giving good transmission values.

Diameter: 3.05mm,
Thickness: 0.7 mil (18µm)
Mesh Diameter: 2mm,
Material: Copper (Cu), Nickel (Ni), Gold (Au).

TECHNICAL TIP

The Preparation of Adhesive Coated Grids for Picking Up Carbon Film to Make Carbon Coated Grids

The following steps should be followed in the preparation of adhesive coated grids:

1. Submerge about 2" of Scotch clear tape (3M) into 10ml of Dichloroethane (Ethylene Dichloride); shake and discard the tape.
2. The solution now becomes "grid-glue"
3. Place the grids (dull side up) on a piece of filter paper (dust-free room).
4. Take a pipette and place a drop of "grid-glue" on top of each grid.
5. Let the grids dry.
6. The grids are now ready to pick up the carbon foil and make the carbon coated grids.

Gilder Thin Bar Grids

Thin Bar Grids have been developed using a new technology to produce ultra-fine grids with thinner cross bars than regular grids. The result is equally firm specimen support but with 40% more open area for viewing maximum specimen surface area.

Gilder Thin Bar High Mesh Values

Revolutionary Specimen Support Grids

Diameter: 3.05mm,
Thickness: 0.8 mil
Material: Copper (Cu), Nickel (Ni)

In addition to our square and hexagonal mesh Gilder Thin Bar Grids, we are now able to produce a very fine mesh that values up to 2,000 lines/inch. There is an increasing need in TEM for support thin films, routinely carbon, as thin as 1.5 - 2.0nm.

The pitch (the distance from the center of one bar to the center of the next bar) dimension in all grids remains constant, which allows them to be used as a lower magnification calibration aid.

Type T600HH (hexagonal) and T600HS (square) represent our efforts to reduce the grid bar width (only 5 microns) enabling more of the specimen to be viewed. All new types, apart from one side being shiny, the other matte, have a large asymmetrical mark in the rim which gives the identification of which side the specimen is on. Grids are 3.05mm overall diameter; 2.05mm mesh area diameter.

TECHNICAL TIP

Removing a Charge from the Surface of Grids

Sometimes when you are trying to pick up sections, they won't adhere to the grid surface. If you don't have time to glow discharge clean the grid surfaces, try this little trick. Dip the grids in distilled water for a moment and wick off the excess with filter paper. Let them dry while you are arranging your sections. Your sections should now adhere to the grid surface. Some labs soak the grids they will use for the day in distilled water until they are needed. If this procedure fails, reclean your grids with acetone or chloroform or glow discharge clean the grid surfaces.

Jeanette Killius, NEOUCOM, Rootstown, OH.

SPECIMEN SUPPORT GRIDS

Veco Grids

With a wide variety of styles available, Veco Grids offer superior handling characteristics. Plus, with a 0.8 mil thickness, Veco Grids are the most rigid grids available.

TECHNICAL TIP

On-Grid Enhancement

The use of nickel grids is recommended for on-grid enhancement, as nickel is relatively insensitive to silver enhancement. Gold or copper grids should not be used.

A Simple Method for Handling Grids

A simplified method for handling EM grids is described. This new method not only offers safety and identification of your samples but offers you improved handling, temporary storage, and identification of grids bearing ultrathin sections as well as a novel method for preparing bulk samples.

Gorycki, M.(1992). A Simple Method for Handling Grids. Biotechnic & Histochemistry 67/5, 313-314.

	0502-Ni	100/vial	200x500

TECHNICAL TIP

The Preparation of Adhesive Coated Grids for Picking Up Carbon Film to Make Carbon Coated Grids

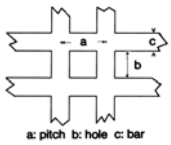
The following steps should be followed in the preparation of adhesive coated grids:

1. Submerge about 2" of Scotch clear tape (3M) into 10ml of Dichloroethane (Ethylene Dichloride); shake and discard the tape.
2. The solution now becomes “grid-glue”
3. Place the grids (dull side up) on a piece of filter paper (dust-free room).
4. Take a pipette and place a drop of “grid-glue” on top of each grid.
5. Let the grids dry.
6. The grids are now ready to pick up the carbon foil and make the carbon coated grids.

SPECIMEN SUPPORT GRIDS

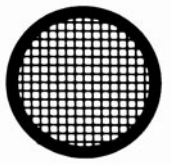
Maxtaform Grids

High Grade Maxtaform Grids with clean and smooth edges, firm support, and a large open area. Our copper grids are available with one surface coated with inert Rhodium. This coating will eliminate tarnishing, give side identification, and reduce the bar thickness.

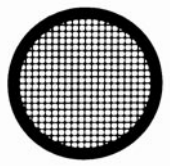


Square Mesh

Diameter: 3.05mm
Thickness: 0.75 mil
Material: Copper/Rhodium (Cu/Rh = CR), Nickel (Ni), Gold (Au)



100–400 mesh



500–600 mesh

Oval Hole

Diameter: 3.05mm, **Thickness:** 0.75 mil
Material: Copper/Rhodium (Cu/Rh = CR), Nickel (Ni), Gold (Au)

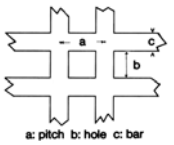
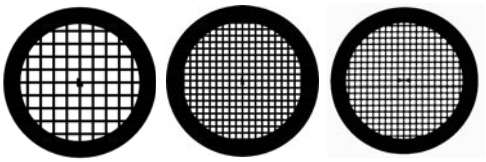
EMBRA Grids



Diameter: 3.05mm, **Thickness:** 16µm for meshed and 5-20 µm for oval hole grids*
Material: Copper (Cu), Nickel (Ni), Gold (Au), Stainless Steel (SS), Titanium (Ti), Molybdenum (Mo), Aluminum (Al)

EMBRA electroformed grids combine a high open area with a rigid construction which allows for relatively easy handling. We offer these grids in a series of hard to find materials, which are not available from other manufacturers. They are as follows: Stainless Steel (SS), Titanium (Ti), Molybdenum (Mo), and Aluminum (Al)

Square Mesh



100 mesh | 200 mesh | 300 mesh

Type	Cat#	Pack	Open Area
100 mesh	E100-SS	25/vial	65%
	E100-Ti	25/vial	65%
	E100-Mo	25/vial	65%
	E100-Al	25/vial	65%
200 mesh	E200-SS	25/vial	50%
	E200-Ti	25/vial	50%
	E200-Mo	25/vial	50%
	E200-Al	25/vial	50%
300 mesh	E300-Ti	25/vial	40%
	E300-Mo	25/vial	40%
	E300-Al	25/vial	40%

Oval Slot

0.4-2mm | 2x1mm

Type	Cat#	Pack	Open Area
0.4x2mm	E0420-SS	25/vial	—
	E0420-Ti	25/vial	—

Index Grids

Alpha Numeric Index Grid

By employing a rectangular mesh the support value of the grid has been increased, offering a value intermediate between the most commonly used grid (200 Lines/") and (300 Lines/"/). Each grid rectangle is asymmetrical having different outlines in all four corners. This allows for the orientation of the grid to be determined at microscopic levels. The index feature enables the position of each grid to be identified with reference to the letters A-O along the horizontal axis and the numbers 1-15 along the vertical axis. The logo in the rim allows for precise orientation and aids in the identification of each side. Grids are available in Copper, Copper/Palladium, Nickel, and Gold.

SPECIFICATIONS:

	Horizontal Axis:	Vertical Axis:
Mesh:	200 Lines/"	250 Lines/"
Pitch:	125 microns	105 microns
Bar Width:	20 microns	15 microns
Hole Width:	105 microns	90 microns
Overall Diameter:	3.05 mm	3.05 mm

CORNER OUTLINE WITH REFERENCE TO LOGO IN THE RIM:

Top Right	Right Angle
Top Left	Inverted Quadrant
Bottom Right	Diagonal Line
Bottom Left	Quadrant

Cat. No.	Description	Pack

SynapTek™ Grids

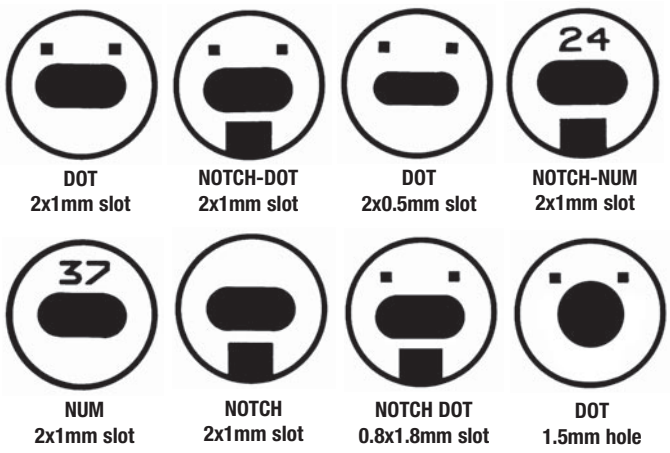
Very reliable under the electron beam- Synaptek® unflexible grids, made of a special alloy (Berylium-Copper). Offers extreme stability for coating with support film. 4 mil thick (100µm), 3.05mm diameter, this standard 2x1mm oval slot grids are contamination free and reusable after cleaning. 0.5x2mm oval slots are also available.

NUM grids: Numbered grids are in random order. Numbers may be duplicated.

DOT grids: 2 dots are marked on one side of the grid for identification. Dots are visible to the naked eye.

NOTCH grids: A mark, stamped on one side of the grid to facilitate the handling of the grids. Notch is available with NUM or DOT grids.

GILDED grids: completely Gold-Plated grids, suitable for immunology research, autoradiography, as well as special needs.



DOT 2x1mm slot | **NOTCH-DOT** 2x1mm slot | **DOT** 2x0.5mm slot | **NOTCH-NUM** 2x1mm slot

Tomography Grids

This 1.5mm square, 300 mesh grid is made from copper and is for use with Fischione tomography specimen holders. The size allows for further tilt in TEMs with small pole piece holes. An identification mark and the square shape give easy reference when rotated past 90°.

TECHNICAL TIP

A Fool-proof Method for Mounting Serial Sections on Single Hole Grids

I did serial sectioning for years on large single hole grids using a very simple technique that made the potential problems of film thickness, wrinkles and section loss very minor. I was not the original developer of the method and do not remember who originally gave it to me. It goes as follows:

1) Have your machine shop cut some thin pieces of Plexiglas into the size of glass slides. At one end, drill about a dozen holes, roughly 5mm in diameter, in an area about the size of a formvar film cast on glass slides. These slides will serve as your template for holding your films.

2) Cast the formvar films onto glass slides using your normal method. Usually a good silver film, not gray, will work fine I routinely used 0.2% formvar in dichloroethane when casting by immersing the slide into the solution in a small jar, etc. We now use a film caster that lets us hold the slide in the dichloroethane vapors after lowering the formvar solution level This method tends to give you thinner films consistently so the correct solution percentage and timing would have to be redetermined.

3) Float the film off the glass slide and pick it up with the Plexiglas slide so the film covers the holes. Then draw the water out of the holes by pressing the plastic slide down onto filter paper, or using small pieces of filter paper and capillary action to draw the water out of individual holes. The films should hold nicely over the holes in the slide. Store slides until needed.

4) Next, cut your sections using a block diameter that is fairly similar to the size of the slit in the grid. Pick up the sections on UNCOATED grids by gently lowering the grid to the surface of the knife boat. I put the dull side down on the premise that the rough surface would grab the film better during step 6. The surface tension of the water will hold the sections in the grid opening. Transfer the grid to a droplet water until you have finished sectioning. Do invert grid. It important the of grid (shiny side) stay dry so that the grid will float on all subsequent solutions.

5) Transfer the grid + sections + water droplet to a drop of stain. A small amount of water will be transferred but this will not interfere with staining. If you are concerned about the dilution effect, increase your staining time slightly. Allow the section to stain, then wash by transferring through a series of droplets of clean water. Continue to if desired and wash the same way. Never let the grid dry. There is minimum problem with stain precipitation if you use very clean water and transfer the grid through a sufficient number of water droplets (6-12 recommended).

6) The final step is to transfer the grid to a film suspended over the hole in a Plexiglas slide and let it dry down. The sections will now be stuck to the film with NO wrinkles and minimum breakage. When ready to view, just punch out around the grid with the tip of your forceps, grab the grid and insert into the microscope.

Believe me....the sections will still be there at the end!

I found that as long as the sections cover a substantial portion of the open area of the grid, carbon coating was not essential. I used to do 50-100 grids worth of serial sections without loosing any. The films on the plastic slides would hold for months so I could make a lot and store until needed.

Plexiglas Microscope Slides

These plexiglass slides are 3 x 1" (75-25mm) and 1 mm thick. They prevent wrinkling and section loss while mounting sections on grids. The procedure is simple (see above).

Copper or Molybdenum Lift-Out Grids

Custom copper or molybdenum lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bars and "V" shaped attachment surfaces. 3mm diameter.

Cat. No.	Description	Pack
75964-01	Copper Lift-Out Grids	100/vial
75964-02	Molybdenum Lift-Out Grids	25/vial

75964-01

75964-02

Beryllium Haft-Ring Grids

Custom beryllium haft ring grids. 3mm diameter.

Cat. No.	Description	Pack
75964-03	Beryllium Haft Ring Grids	10/pk

75964-03

Copper 5-Post Lift-Out Grids

Custom copper 5-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, all with vertical bars attachment surfaces. Now with lower profile sides for easier access to utermost posts. 3mm diameter.

Cat. No.	Description	Pack
75964-04	Copper 5-Post Lift-Out Grids	100/vial

75964-04

Copper or Molybdenum 4-Post Lift-Out Grids

Custom copper or molybdenum 4-post lift-out grids specially designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bars attachment surfaces and two with "V" shaped alignment surfaces. Sides have lower profile for easier access to outermost posts. 3mm diameter.

Cat. No.	Description	Pack
75964-05	Copper 4-Post Lift-Out Grids	100/vial
75964-06	Mo 4-Post Lift-Out Grids	25/vial

75964-06

Copper 3-Post Lift-Out Grids, Side Access

3 post copper lift-out grids, similar to 75964-01, in design but 35 micron thick with 1 edge lower for easy access. Packaged in glass vials

Cat. No.	Description	Pack
75964-07	Copper 3-Post Lift-Out Grids, Side Access	100/vial

75964-07

Copper 3-Post Lift-Out Grids, Shallow Downset

3 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations with both vertical bar and "V" shaped attachment surfaces. These grids have a shallower downset and slightly wider center post than 75964-01. Packaged in glass vials.

Cat. No.	Description	Pack
75964-08	Copper 3-Post Lift-Out Grids, Shallow Downset	100/box

75964-08

Copper 5-Post Lift-Out Grids

5 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations, all with vertical bar attachment surfaces. Now with lower profile sides for easier access to outermost posts. 3mm dia. Packaged in glass vials.

Cat. No.	Description	Pack
75964-09	Copper 5-Post Lift-Out Grids	100/box

75964-09

Copper 4-Post Lift-Out Grids

4 post copper lift-out grids specifically designed for in-situ lift-out. These grids include multiple indexed mounting locations, two with vertical bar attachment surfaces and two with "V" shaped alighment surfaces. Sides have lower profile for easier access to outermost posts. 3mm dia. Packaged in plastic vials.

Omniprobe TEM Grids & Accessories (continued)

Short-Cut™ Coupons

Frontside Thinning, 45˚

Frontside Thinning, 45˚, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 45˚. Available in two versions: One is made from pure copper and the other is molybdenum coated copper.

Cat. No.	Description	Qty.
75974-Cu	Frontside Thinning Copper, 45˚	20/pk
75974-Mo	Frontside Thinning Mo/Cu, 45˚	20/pk

Backside Thinning, 45˚

Backside Thinning, 45˚, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 45˚. Available in two versions: One made from pure copper and the Other is molybdenum coated copper.

Cat. No.	Description	Qty.
75975-Cu	Backside Thinning Copper, 45˚	20/pk
75975-Mo	Backside Thinning Mo/Cu, 45˚	20/pk

Frontside Thinning, 26.5˚

Frontside Thinning, 26.5˚, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 26.5˚. Available in two versions: One made from pure copper and the other is molybdenum coated copper.

Cat. No.	Description	Qty.
75976-Cu	Frontside Thinning Copper, 26.5˚	20/pk
75976-Mo	Frontside Thinning Mo/Cu, 26.5˚	20/pk

Backside Thinning, 26.5˚

Backside Thinning, 26.5˚, TEM sample grid coupon designed specially for use in the Short-Cut™ tool. The center portion is a standard 3 mm grid into which the sample loaded needle is swaged and cut 26.5˚. Available in two versions: One made from pure copper and the other is molybdenum coated copper.

75977-Mo	Backside Thinning Mo/Cu, 26.5˚	20/pk

Grid & Sample Holders

TEM Grid Dual Holders

Post Base TEM Grid Holder. Available in two versions: stainless steel (SS—very slightly magnetic), can affect imaging in UHS mode; and aluminum (Al-non-magnetic). Short post – standard is ⅛" (3.2mm) diameter x 0.15" (4mm) length.

Cat. No.	Description	Qty.
75968-SS	TEM, Grid Dual Holder, SS	each
75968-Al	TEM, Grid Dual Holder, Al	each

TEM Grid & Sample Holders

TEM grid holder with stations for 2 TEM grids and 2 sample stubs. Available in two versions: stainless steel (SS – very slightly magnetic), and aluminum (Al-non-magnetic). Long post – standard is ⅛" (3.2mm) diameter x 0.32" (8.1mm) length. Comes with 2 sample stubs.

Cat. No.	Description	Qty.
75969-SS	TEM Grid & Sample Holder, SS	each
75969-Al	TEM Grid & Sample Holder, Al	each

Single Stub & Two TEM Grid Holders

This station is meant for 2 TEM grids and 1 sample Pin Stub. Available in Stainless Steel (SS – very slightly magnetic).

Long post – standard is 1/8" (3.2mm) diameter x 0.32" (8.1mm) length. Comes with an aluminum sample stub.

Cat. No.	Description	Qty.
75971-SS	TEM Grid & Sample Holder, SS	each

LIFT-OUT GRIDS

Omniprobe TEM Grids & Accessories (continued)

Tungsten/Nickel Probe Tips

Custom tip designed with a nickel tube shank and tungsten tip. Tip radius is 0.5µm with 13˚ taper angle for maximum lifetime service.

Cat. No.	Description	Qty
75960-01	Tungsten/Nickel Probe Tip	10/bx

Tungsten Probe Tips

Custom tip designed from tungsten. Tip radius is 0.5µm with 13˚ taper angle for maximum lifetime service.

Cat. No.	Description	Qty
75960-02	All Tungsten Probe Tip	10/bx

In-Situ Probe Tips

Custom tungsten tip with a stainless steel shank, for use with AutoProbe™ 300, in-situ probe tip exchange systems and Short-Cut™. Tip radius is 0.5µm with 8 –10˚ taper angle. This tip is also Short-Cut™ compatible.

Cat. No.	Description	Qty
75960-03	in-Situ Probe Tip	20/bx

Xtreme Access ½" Tungsten Probe Tips

Custom tip designed from tungsten. Tip radius is < 0.5µm with 13˚ taper angle for maximum lifetime service.

Cat. No.	Description	Qty
75960-04	XA ½" Tungsten Probe Tip	10/bx

Autoprobe 250 Tungsten Probe Tips

Custom tip designed from tungsten. Tip radius is < 0.5µm with 6˚ taper angle for maximum lifetime service. Compatible with Short-Cut™ system for direct conversion to TEM grid.

Cat. No.	Description	Qty
75960-05	AP250 Tungsten Probe Tip	10/bx

Xtreme Access Short-Cut™ Probe Tips

Custom tip designed from tungsten. Tip radius is < 0.5µm with 6˚ taper angle for maximum lifetime service. Compatible with Short-Cut™ system for direct conversion to TEM grid.

Cat. No.	Description	Qty
75960-06	XA Short Cut Tungsten Probe Tip	10/bx

XA Probe Point Holder

Xtreme Access Probe Tip Holder for use with ½" tungsten probe tip, #75960-04 and #75960-06.

Comes with a storage vessel.

Cat. No.	Description	Qty
75961-10	XA Probe Point Holder	each

End Effector Type 3 (Straight)

Straight End Effector for Xtreme Access probe shaft. Available in two versions: Copper (Cu) and Molybdenum (Mo)

Cat. No.	Description	Qty
75981-Cu	Cu Straight End Effector Type 3	12/bx

YOU MAY NEED...

EMS Tweezer Style SM 110

Straight "T" shaped tips with a vertical groove inside for holding cylindrical objects up to 1mm diameter.

Length: 4-3/4" (120mm).

Absolutely perfect for holding and installing Omniprobe Tips (sold separately). Especially if you're using Cryo-lift out and have to install the tip with the rod already inserted into the SEM chamber.

Forceps provide a firm grip and longitudainal stability reducing the chance of dropping the tip.

Cat. No.	Description	Qty.
78250-100	EMS SM 110 Tweezers	each

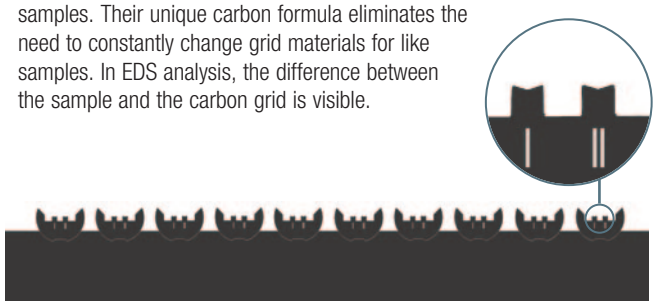
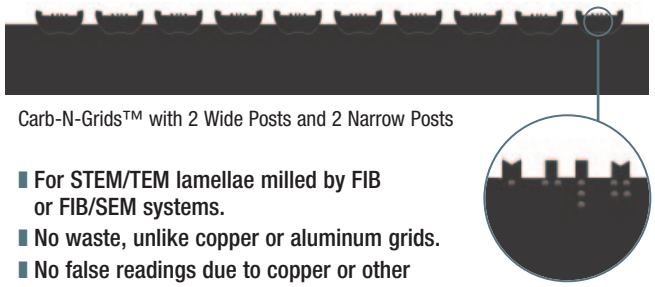
Carb-N-Grids™ 2 & 4 Post 3mm Lift-Out Grids

A durable carbon lift-out grid that facilitates precise Elemental Analysis.

Most common lift-out grids are made of copper, nickel, gold and molybdenum, which can all have inherent disadvantages in some scenarios. Carb-N-Grids™ facilitate precise Elemental Analysis by avoiding false peaks that can result from similar materials inside and outside samples. Their unique carbon formula eliminates the need to constantly change grid materials for like samples. In EDS analysis, the difference between the sample and the carbon grid is visible.

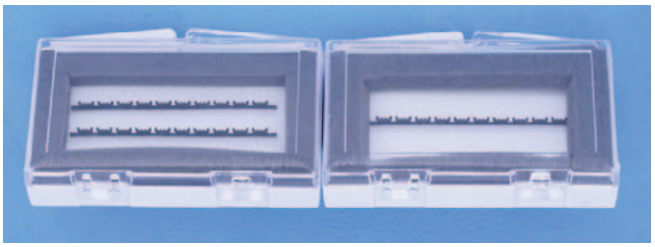


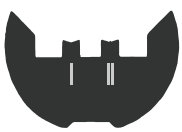
Carb-N-Grids™ with 2 Wide Posts



Carb-N-Grids™ with 2 Wide Posts and 2 Narrow Posts

- For STEM/TEM lamellae milled by FIB or FIB/SEM systems.
- No waste, unlike copper or aluminum grids.
- No false readings due to copper or other trace elements
- No fluorescence
- Secure clamping without bending.
- Available with both post- and V-mounting capability.
- Packaged in a holder with 10 precut grids that break off easily using suitable tweezers.





75966-01

Silicon Nitride Lift-Out TEM Windows

Low-stress silicon nitride for lift-out applications

Available with or without gold contacts.

State Of The Art — Our expert engineering and MEMS fabrication processes allow us to provide these one of a kind silicon nitride lift-out grids.

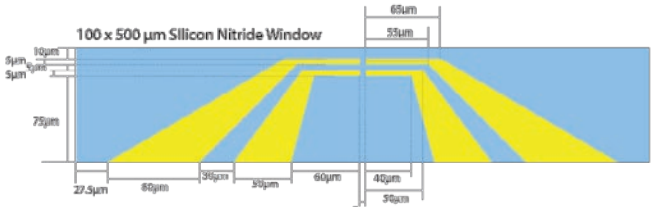
Open Half-Grid Shape — Our Silicon Nitride Lift-Out TEM Windows feature a large, robust window with a freely suspended side along one length of the window, providing an easily accessed edge for sample preparation and thinning to electron transparency (e.g. 50 nm or less).

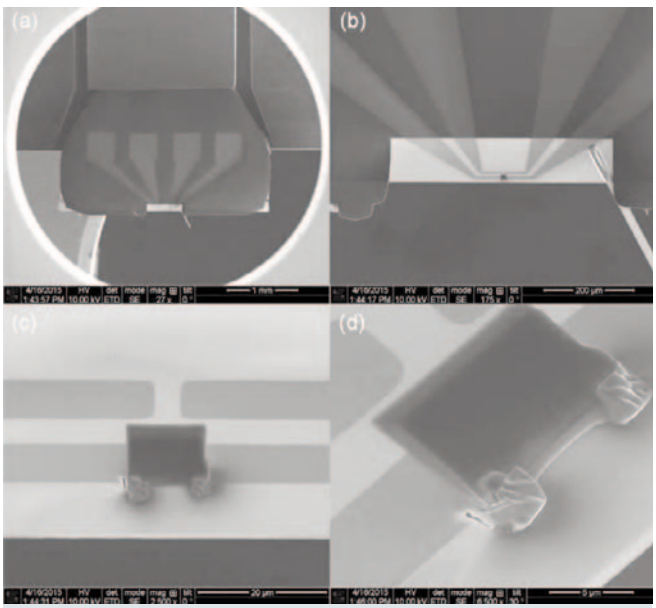
76043-02

Ready To Use Gold Contacts — 200 nm thick gold contacts for sample electrical biasing or heating are formatted for FIB-based sample preparation methods.

76043-01

Schematic of Silicon Nitride Window with Gold Contacts





A view through the electron column down onto the Lift-Out Grid is shown in image (a). In this position the Lift-Out Grid is perpendicular to its edge-on position relative to the electron beam column used to attach the lamella. A higher magnification image of the lamella and silicon nitride membrane is shown in image (b), and an even higher magnification is shown in image (c). Image (d) shows an angled perspective of the Lift-Out Grid and lamella.

SUPPORT FILM ON GRIDS

To make your microscopy work easier and to save you a great deal of time we offer a complete line of high-quality coated grids. All our coated grids are optically checked followed by batch testing in the EM. They are packed in grid storage boxes.

All the grids below (except the Beryllium Support Films) have the following options:

- Molybdenum grids instead of Au, Cu, Ni
- Silicon-free
- With ultra-thin thickness (thickness can be requested)
- Extra thick thickness

NOTE: All our film is laid on the shiny side of the grid.

Ordering Information Color Code:

SUPPORT FILM ON GRIDS

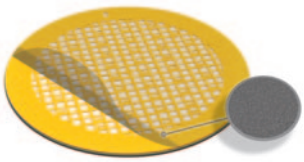
Square Mesh



Gilder Finder Type F1

Gilder Finder Type F2

Carbon Film Only

A thin film of pure carbon deposited on one side of the grid. The thickness range is as follows: **Standard:** Approx. 5-6nm, **Ultra-Thin (UL):** 3-4nm, **Thick (TH):** 10nm, **Extra Thick (ET):** 20-30nm

TECHNICAL TIP

Removing a Charge from the Surface of Grids

Sometimes when you are trying to pick up sections, they won't adhere to the grid surface. If you don't have time to glow discharge clean the grid surfaces, try this little trick. Dip the grids in distilled water for a moment and wick off the excess with filter paper. Let them dry while you are arranging your sections. Your sections should now adhere to the grid surface. Some labs soak the grids they will use for the day in distilled water until they are needed. If this procedure fails, reclean your grids with acetone or chloroform or glow discharge clean the grid surfaces.

Jeanette Killius, NEOUCOM, Rootstown, OH.

TECHNICAL TIP

A Simple Method for Handling Grids

A simplified method for handling EM grids is described. This new method not only offers safety and identification of your samples but offers you improved handling, temporary storage, and identification of grids bearing ultrathin sections as well as a novel method for preparing bulk samples.

Gorycki, M.(1992). A Simple Method for Handling Grids. Biotechnic & Histochemistry 67/5, 313-314.

SUPPORT FILM ON GRIDS

Formvar/Carbon Film

A formvar coated grid, stabilized with evaporated carbon film. This type of coating is excellent for specimen support, especially for ultra thin sections. The thickness range is as follows:

Standard Option A: 10nm Formvar and 1nm Carbon
Standard Option B (SB): 10nm Formvar and 3-4nm Carbon
Standard Option C (SC): 10nm Formvar and 20-30nm Carbon
Ultra-Thin Option A (UA): 5-6nm Formvar and 1nm Carbon
Ultra-Thin Option B (UB): 5-6nm Formvar and 3-4nm Carbon
Ultra-Thin Option C (UC): 5-6nm Formvar and 20-30nm Carbon
Thick Option A (TA): 15-20nm Formvar and 1nm Carbon
Thick Option B (TB): 15-20nm Formvar and 3-4nm Carbon
Thick Option C (TC): 15-20nm Formvar and 20-30nm Carbon
Extra Thick Option A (EA): 25-50nm Formvar and 1nm Carbon
Extra Thick Option B (EB): 25-50nm Formvar and 3-4nm Carbon
Extra Thick Option C (EC): 25-50nm Formvar and 20-30nm Carbon

Guide to Thickness Ranges

Standard Option A: 10nm Formvar and 1nm Carbon
Standard Option B (SB): 10nm Formvar and 3-4nm Carbon
Standard Option C (SC): 10nm Formvar and 20-30nm Carbon
Ultra-Thin Option A (UA): 5-6nm Formvar and 1nm Carbon
Ultra-Thin Option B (UB): 5-6nm Formvar and 3-4nm Carbon
Ultra-Thin Option C (UC): 5-6nm Formvar and 20-30nm Carbon

Thick Option A (TA): 15-20nm Formvar and 1nm Carbon
Thick Option B (TB): 15-20nm Formvar and 3-4nm Carbon
Thick Option C (TC): 15-20nm Formvar and 20-30nm Carbon
Extra Thick Option A (EA): 25-50nm Formvar and 1nm Carbon
Extra Thick Option B (EB): 25-50nm Formvar and 3-4nm Carbon
Extra Thick Option C (EC): 25-50nm Formvar and 20-30nm Carbon

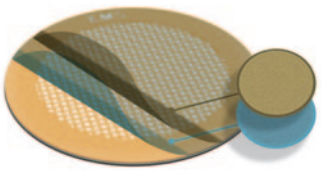
Formvar/Silicon Monoxide

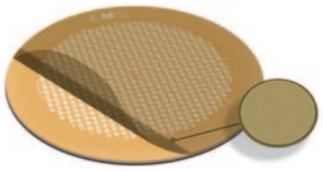


A formvar film stabilized with a thin film of Silicon Monoxide. Silicon Monoxide produces a desirable support film because it offers low background contrast and it is stable under the electron beam and it is more hydrophilic than carbon film.

Cat. #	Type	Qty
FSF200-Cu	200 mesh	50/box
FSF300-Cu	300 mesh	50/box
FSF400-Cu	400 mesh	50/box

Cat. #	Type	Qty
FSF200-Ni	200 mesh	50/box
FSF300-Ni	300 mesh	50/box
FSF400-Ni	400 mesh	50/box

Silicon Monoxide Film Only



A thin film of pure Silicon Monoxide (15–30 nm) is deposited directly on top of the grid.

Cat. #	Type	Qty
SF200-Cu	200 mesh	50/box
SF300-Cu	300 mesh	50/box
SF400-Cu	400 mesh	50/box

Cat. #	Type	Qty
SF200-Ni	200 mesh	50/box
SF300-Ni	300 mesh	50/box
SF400-Ni	400 mesh	50/box

Continuous Ultrathin Films

The continuous ultrathin film on holey film allows for the thinnest support film that still has adequate strength to withstand specimen preparation The film (less than 3nm thick) lies across a carbon lacey film supported by a 200, 300, or 400 mesh grid. The size of the holes in the holey film differ widely from batch to batch but are generally in the range of ¼ µm to 5µm, which gives the equivalent support of at least 6000 mesh grid. Specimen material lying over the covered holes can be imaged in the TEM with practically no interference from the carbon film supporting it. This product is ideal for looking at nanotubes, virus particles and other small particulate material.

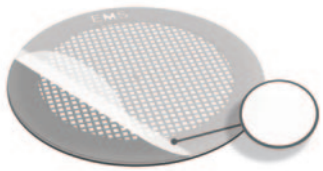
Pioloform Film

NEW



A thin film of Pioloform deposited on one side of the grid.

EMS is proud to introduce a new line of coated grids made with Pioloform, which offers the advantage of higher thermal stability, as well as mechanical stability, over Formvar. These coated grids have no carbon layer and offer less electron scattering. *NOTE: All of our film is laid on the shiny side of the grid.*

- 3.05mm grids in Au, Ni, and Cu.
- Available in 25/pack grid storage boxes.
- 6 mesh sizes: 75 Mesh, 100 Mesh, 200 Mesh, 300 Mesh, 400 Mesh, and 2 x 1mm.

Standard Thickness, approx. 5–6 nm

Beryllium Support Films

A deposition of 250 Angstroms thick Beryllium onto the 0.005" thick, 25x25mm squares of a Cu substrate. The Be can be removed by dissolving the substrate in nitric acid (50:50). The Be film will then be removed from the acid, washed in distilled water and mounted on TEM grids. A Be support film will reduce background interference to a minimum and it is particularly useful where analyses for C or Si are required, so that these alternative supports cannot be used. Another advantage of the Be support is its very fine grain size which produces a very sharp ring pattern for in-situ calibration.

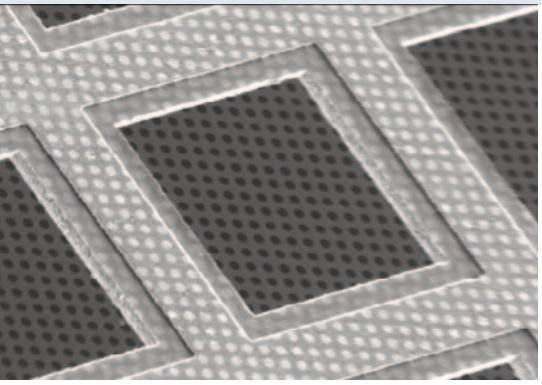
Cat #	Description	Qty
76030	Beryllium Support Film, 25x25mm	each

The C-flat™ Family

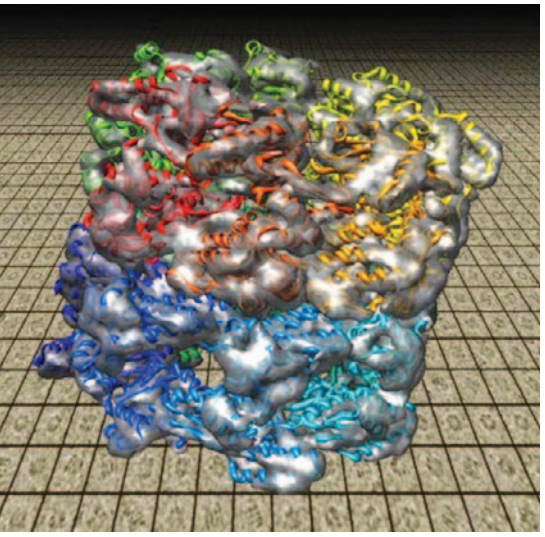
Holey Carbon, Gold Grids for S/TEM and Cryo-TEM... **now by EMS.**

Electron Microscopy Sciences is pleased to announce the acquisition of the C-flat™, Au-flat™, and CD-flat™ product lines, which can be purchased directly from EMS effective immediately.

We are excited to continue to offer and expand on the C-flat line and look forward to working with all our current and new customers in the years ahead.

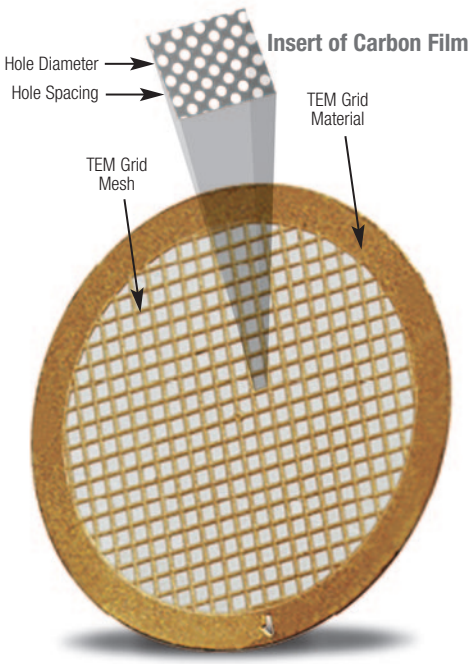


Below: 250,000 particles of GroEL in 24 hours. Image Courtesy of Scott Stagg and Mike Pique NRAMM, The Scripps Research Institute (data acquired on CF-2/2-4C)



The C-flat™ Advantage

C-flat™ is an ultra-flat, holey carbon-coated TEM support grid for transmission electron microscopy (TEM). Unlike competing holey carbon films, C-flat™ is manufactured without plastics, so it is clean upon arrival and the user has no residue to contend with.



C-flat™ leads to better data sets.
Made with patented technology, C-flat™ provides an ultra-flat surface that results in better particle dispersion and more uniform ice thickness. Patterning is done using deep-UV projection lithography, ensuring the most accurate and consistent hole shapes and sizes down to submicron features. The precise methods by which C-flat™ is manufactured eliminate artifacts such as excess carbon and edges around holes.

C-flat™ is affordable
C-flat™ is available in 25, 50, and 100 packs at a per-grid price less than competing products.
With 54 varieties, there is always a C-flat™ product optimized for your needs.

Applications

The perfect choice for...
- Single particle analysis
- Cryo electron tomography
- Automated TEM workflow

C-flat™ holey carbon grids provide the ideal specimen support to achieve high resolution data in cryo-TEM making them an ideal choice for single particle analysis, cryo electron tomography and automated TEM analysis.

Cryo-electron tomography (cryoET) and Single Particle Analysis (SPA):
Numerous researchers have reported that the ultra-flat surface of C-flat™ leads to even ice thickness and uniform particle distribution within the hole areas. This optimal particle distribution results in superior data being collected as compared with other holey support films. 2µm hole sizes are standard but custom

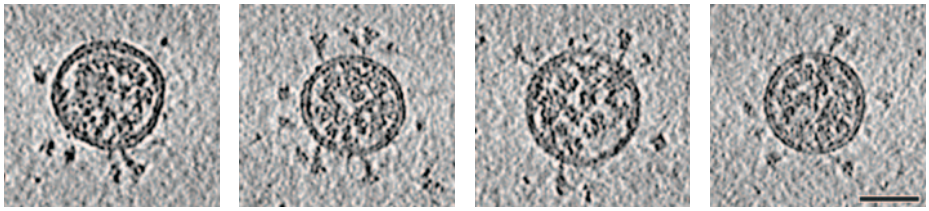
C-flat™ Family of Holey Carbon, Gold Grids for S/TEM and Cryo-TEM (continued)

C-flat™ (continued)

The premier holey carbon grid for cryo-transmission electron microscopy



Above: Cryo-ET using C-flat 2/2 hole pattern on Covid 19 Spike Protein. Ke, Z., Oton, J., Qu, K. et al. Structures and distributions of SARS-CoV-2 spike proteins on intact virions. Nature (2020). https://doi.org/10.1038/s41586-020-2665-2

hole sizes are available so C-flat™ can accommodate the common magnifications used for quantitative TEM analysis.

Automated TEM:

C-flat™ provides a regular array of analysis sites compatible with automated data collection software such as Leginon. This compatibility, in combination with the more uniform ice thickness and particle distribution reported by numerous researchers, results in more high-quality target sites per grid.

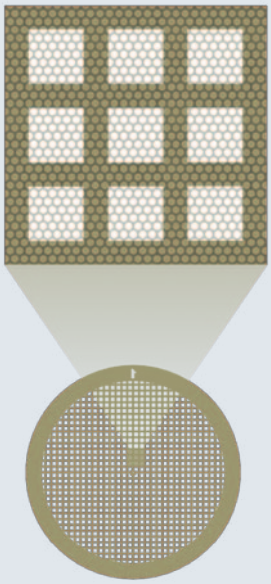
III CD-flat™ for Automated S/TEM Imaging and Metrology

The C-flat™ advantage in a new pattern



CD-flat™ — the premier ultra-flat holey carbon grid is ready to use with no additional cleaning or handling steps, and is now available, featuring a NEW 8/2 hole pattern. CD-flat is designed for CD-TEM metrology of large specimens, like 3D NAND FIB lamella.

Specifications

Grid Material	Copper
Mesh Size	300 Mesh
O.D.	3.05mm
Film Material	Holey Carbon
Film Thickness	40nm
Hole Pattern	8/2 (8 um diameter, 2 µ spacing between holes)

TEM SUPPORT FILMS

C-flat™ Family of Holey Carbon, Gold Grids for S/TEM and Cryo-TEM (continued)

Standard Products

The breadth of applications in cryoTEM necessitate a wide range of holey carbon film patterns. And now, with the recent expansion of the product line, a C-flat™ holey carbon film is available for almost any application. Whether 600nm holes are needed for very high magnifications with ultra-high resolution cameras or large open areas are needed for larger specimens, C-Flat™ is the perfect holey carbon grid.

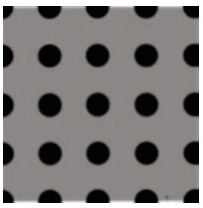
C-flat™ is immediately available in several standard array patterns including hole diameters/hole spacings of 1.2/1.3, 2/1, 2/2, 2/4, 4/2, and a multihole pattern. C-flat™ is supported by your choice of a 200 mesh 300 mesh, or 400 mesh copper TEM grid and sold in quantities of 25, 50, or 100.

Thick Products

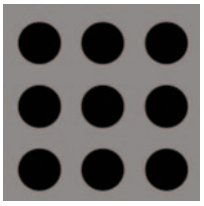
C-flat™ is available in a thick option that doubles the carbon thickness from approximately 20nm to 40nm. Thick C-flat product numbers end in -T, catalog numbers contain "CFT". Available in quantities of 50 and 100 per pack.

Standard Array Patterns

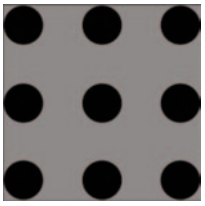
CF-1.2/1.3
1.2µm hole, 1.3µm space



CF-2/1
2.0µm hole, 1.0µm space

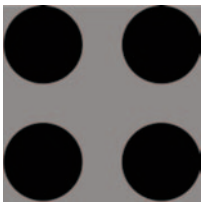


CF-2/2
2.0µm hole, 2.0µm space



CF-2/4
2.0µm hole, 4.0µm space

CF-4/2
4.0µm hole, 2.0µm space



CF-MH
Multihole

NEW Trial Sizes!

C-flat Holey Carbon on Copper or Gold and C-flat Thick Option on Copper

Not sure if C-flat is right for your application? Now you can try it out with a trial size of 10 per pack in our most popular sizes and types! See the special ordering table below. **Thick version indicated with a "-T."**

Product Code	Cat. #	Hole Size	Hole Spacing	TEM Mesh	TEM Grid	Qty.

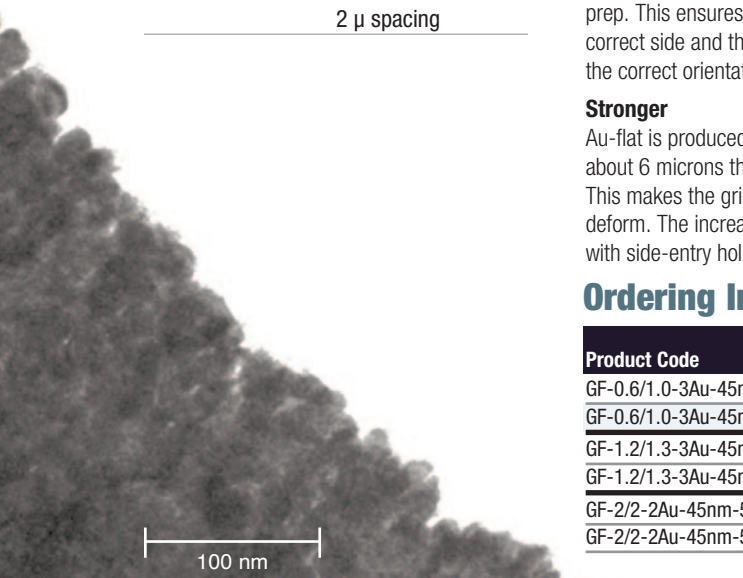
Specifications

Grid Material	Gold
Mesh Size	200, 300 Mesh
O.D.	3.05mm
Film Material	Gold Alloy
Film Thickness	45nm
Hole Patterns	
0.6/1.0	0.6 um dia., 1.0 µ spacing
1.2/1.3	1.2 um dia., 1.3 µ spacing
2/2	2 um dia. 2 µ spacing



Au-flat™ for High Resolution Imaging

Gold foil sample supports for Cryo-EM

Au-flat is an ultrastable Cryo-EM sample support with a 45nm holey Gold alloy film on 3 mm gold mesh grids. Au-Flat is a derivative of our patented C-flat product.

What varieties of Au-flat are available?

Au-flat is offered in three configurations:

- *0.6 µm/1.0 µm hole pattern on 300 mesh Gold grids*
- *1.2 µm/1.3 µm hole pattern on 300 mesh Gold grids*
- *2µm/2µm Hole pattern on 200 mesh Gold grids*

What are the benefits of Au-flat over Holey Carbon Supports like C-flat?

Better reconstructions with less data

Au-flat significantly reduces beam-induced motion during imaging compared to carbon films, improving image quality and resolution.

Biocompatible

Au-flat features a holey Au/Pd film on a gold mesh grid, so it's chemically inert and biologically compatible.

Durable

Au-flat's film is significantly stronger than carbon films and is more capable of surviving the Cryo-EM workflow including tweezer handling, glow discharge, blotting, auto-grid loading and plunge freezing.

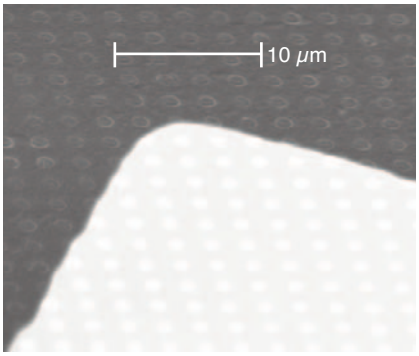
What are the benefits of Au-flat over other Gold Foil TEM Grids?

No Mistakes

The lighter color of the Au/Pd alloy film compared to the underlying gold mesh grid makes it easy to identify the "holey" side of the grid during sample prep. This ensures the sample is deposited on the correct side and that the grid is loaded and imaged in the correct orientation.

Stronger

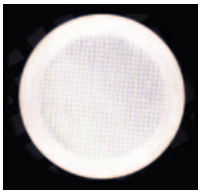
Au-flat is produced with gold mesh grids that are about 6 microns thicker than typical Cryo-EM grids. This makes the grids stiffer and less likely to bend or deform. The increased thickness is fully compatible with side-entry holders as well as auto-loaders.



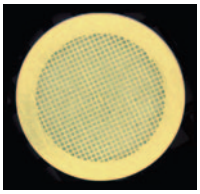
Uniform vitreous ice across the grid

Au-flat uses new, ultra-flat precision gold grids which create a more planar surface. The result is **more uniform thin ice** across the entire surface, including areas near the grid bars.

Au/Pd Foil Side



Gold Mesh Side



The lighter color of the Au-Pd film compared to the underlying gold mesh grid makes it easy to identify the film side of the grid during sample preparation.

Ordering Information

Product Code	Cat. #	Hole Size	Hole Spacing	TEM Mesh	TEM Grid	Qty.

GF-0.6/1.0-3Au-45nm-5	**AUFT306-05**	0.6 µm	1.0 µm	300	Au	5/pk
GF-1.2/1.3-3Au-45nm-50	**AUFT313-50**	1.2 µm	1.3 µm	300	Au	50/pk
GF-1.2/1.3-3Au-45nm-5	**AUFT313-05**	1.2 µm	1.3 µm	300	Au	5/pk
GF-2/2-2Au-45nm-50	**AUFT222-50**	2 µm	2 µm	200	Au	50/pk
GF-2/2-2Au-45nm-50	**AUFT222-05**	2 µm	2 µm	200	Au	5/pk

Accurate defocus

The smaller grain size of the gold film provides more features to focus on, leading to **more accurate defocus** during data collection.

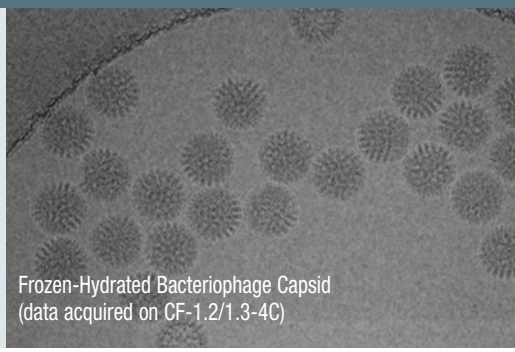
C-flat™ Family of Holey Carbon, Gold Grids for S/TEM and Cryo-TEM (continued)

Holey Carbon Grids for Cryo-TEM

Cryo Preparation Using C-flat™

Overview

C-flat™ is a holey carbon support film, manufactured using a patented semiconductor-based technology without plastics, resists or other soft materials. As a result, the carbon films are flat, uniform and free of residues or plastics. C-flat™ is designed to be an "out of the box" solution, and should require minimal sample preparation. Extensive plasma cleaning is not needed, and could potentially thin the carbon, making it too fragile for blotting or freezing.



Frozen-Hydrated Bacteriophage Capsid
(data acquired on CF-1.2/1.3-4C)

Plasma Preparation

If you are using C-flat™ for the first time, it is recommended that no plasma preparation be used initially. As with any carbon film, plasma preparation is sometimes necessary to make the surface more hydrophilic. If your initial results dictate making the films more hydrophilic, below are some guidelines for preparation using several common systems.

Fischione Model 1020

- 25% Oxygen/75% Argon
- Use 5 grid holder and dampening shield
- Plasma clean grids for 10-30 seconds

Note: It is recommended that the dampening shield be used when cleaning C-flat™ using the Fischione Model 1020 plasma cleaner. The shield will dampen the effect of the plasma, reducing the erosion rate of the carbon while allowing the film to become more hydrophilic.

Gatan Solarus™

- 25% Oxygen/75% Argon
- Place grids on a support (e.g. glass slide)
- Set slide in the bottom of the chamber
- Set RF power to 25 watts
- Plasma clean grids for 10-20 seconds

Glow Discharge

These systems vary widely depending on the manufacturer. Typically, keep the glow from the plasma dim and the clean time approximately 10-30 seconds.

Plunge Freezing

Recommended settings for plunge freezing with the Vitrobot™

- **Temperature:** 4°C
- **Humidity:** 100% (can vary between 90–100%)
- **Blot Time:** 3-5 seconds
- **Volume on Grid:** 3µL (can vary)
- **Drain Time:** 0 seconds
- **Offset:** 0 for regular samples, –1 for viscous

When using the Vitrobot™, it is recommended that the filter paper be changed regularly (generally after freezing 4-5 grids or 10 minutes, whichever comes first.) The filter paper can become saturated in the high humidity environment of the chamber.

Working with Viscous Samples

Generally, lowering the volume of solution on the grid can help to eliminate the need for multiple blots, which can damage the carbon film. As little as 1µL of solution can cover a 3mm grid area if the pipette tip is used to spread the drop, but reducing the volume to 1.5 or 2.0µL will help as well. Once the sample is on the grid, it should be blotted within a few minutes before further evaporation occurs. If a Vitrobot™ is used, changing the offset from 0mm to -1 or -2mm can also help.

Hydrophilicity/Hydrophobicity

Increasing the hydrophilicity of the carbon film will help a droplet spread evenly over the carbon, rather than pool on the surface. The most common method for achieving this is by plasma or glow discharge; recommended settings for various equipment are given. Keep in mind that C-flat™ is manufactured without any plastics or soft materials in the process, therefore plasma or glow discharge steps are only needed to make the surface more hydrophilic, not to clean. For this reason, a lower power and time is generally used.

Adding Carbon to C-flat™

Many C-flat™ parts are now offered in both the standard as well as a thicker carbon film, designed to give each lab the option to choose not only the most appropriate hole geometry and size, but also the ideal carbon thickness for their application. In addition, carbon can be added to C-flat™ either to thicken the existing hole pattern, or as a thin continuous overlay across the hole pattern. Overlays are often used when particles have a strong affinity towards the carbon material.

Keeping the Carbon Intact

C-flat™ is designed to be an "out of the box" solution. Extensive sample preparation steps are generally not required, and often carbon that is torn or broken is a sign of plasma cleaning that is too long and/or at too high a power setting. Please refer to the suggestions on plasma cleaner settings, as well as on working with viscous samples.

YOU MAY NEED...

Plunging Tweezers for the CP3 (Cryoplunge™ 3)

These custom tweezers specifically made to fit the Gatan Cryoplunge™, an instrument used in the preparation of frozen hydrated specimens for cryoEM.

Cat No.	Description	Qty.
CP3690	Plunging Tweezers	each

Vitrobot™ Filter Paper

This special Filter Paper has an outer diameter of 55 mm, with an inner diameter of 20 mm. Made from Grade 595 paper.

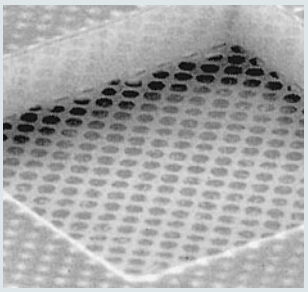
Cat No.	Description	Qty.
71166-65	Vitrobot™ Filter Paper	100/pk

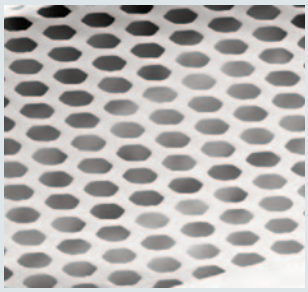
QUANTIFOIL® Holey Carbon Films

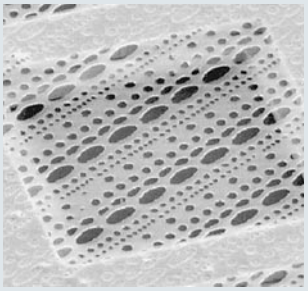
Overview

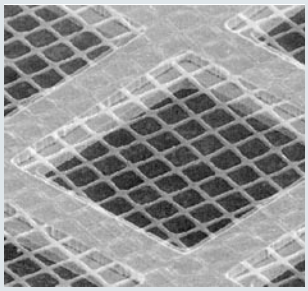
QUANTIFOIL® is a perforated support foil with pre-defined hole size, shape and arrangement. It has advantages in electron microscopy (EM) or low-energy electron point source (LEEPS) microscopy when compared with conventional holey film.

QUANTIFOIL® is offered with circular and square, orthogonal arranged holes. Films with different hole sizes and bar widths are available. Carbon is the standard material that makes the foil.









QUANTIFOIL® is a superior quality of holey carbon film, which facilitates the use of automation in TEM. (e.g. The National Resource for Automated Molecular Microscopy, at the Scripps Research Institute, has developed a system, called Leginon, for automatically acquiring images from a transmission electron microscope).

The surface properties of QUANTIFOIL® holey carbon support film, especially the wetting properties, may have to be adapted according to one's particular requirements. Untreated aging QUANTIFOIL® tends to be hydrophobic. Hydrophillicity of the foil can be achieved by glow discharging in residual air or by metal coating.

QUANTIFOIL® in low-energy electron point source (LEEPS) microscopy. QUANTIFOIL® with a regular pattern is required in order to be able to distinguish an object, which is spanned over a hole. An object cannot be discriminated from the support in the case of conventional holey support film. (H.W. Fink & C. Schonenberger, University of Basel, used QUANTIFOIL® for the measurement of electrical current through DNA molecules.)

The foil is ~12 nm thick and mounted on either copper, nickel or gold grids with either square or round holes of different sizes.

Holey films with 2µ round holes are used at magnifications between 30,000x and 40,000x.

QUANTIFOIL® with Circular Holes

QUANTIFOIL® with circular holes is used in cryoelectron tomographic reconstruction. The roundness of the holes is advantageous with respect to the formation of an ice layer of constant thickness. The hole size chosen depends on the magnification used, and on whether or not one wishes to include support film in the image.

Assessment of the image quality is easier when foil is included in the picture, because the power spectrum of a foil is stronger than that of unsupported ice.

TECHNICAL TIP

Removing a Charge from the Surface of Grids

Sometimes when you are trying to pick up sections, they won't adhere to the grid surface. If you don't have time to glow discharge clean the grid surfaces, try this little trick. Dip the grids in distilled water for a moment and wick off the excess with filter paper. Let them dry while you are arranging your sections. Your sections should now adhere to the grid surface. Some labs soak the grids they will use for the day in distilled water until they are needed. If this procedure fails, reclean your grids with acetone or chloroform or glow discharge clean the grid surfaces.

Jeanette Killius, NEOUCOM, Rootstown, OH.

TECHNICAL TIP

Additional Ultrathin Continuous Carbon Layer

An ultrathin (2-3 nm) carbon layer applied to grids is widely recommended to improve particle distribution[1,2,3] and has been shown to improve data quality when applied to both QUANTIFOIL® [4] Holey Carbon Films and UltrAuFoil® [5] Gold Supports.

Many biomolecules have a strong affinity for carbon, and a number of factors contribute to the improved specimen quality:

- **Increased numbers of particles due to adsorption of biomolecules onto carbon prior to blotting.**
- **Improved particle distribution due to interaction with carbon surface across the hole.**
- **Reduction in the number of particles adopting a preferred orientation.**

An additional carbon layer can be added to most QUANTIFOIL holey carbon film support. The most popular thickness is 2 nm.

Shown above is the structure of *Photorhabdus luminescens* TcdA1, a large multi-subunit complex toxin, with activity against insects, whose structure was determined using images collected on QUANTIFOIL R 2/1 grids with a 2 nm additional carbon layer[6].

QUANTIFOIL® R 3.5/1 may be preferred over foils with smaller holes if the carbon film should be outside the frame of the image. This option can be desirable in the case of extended objects, such as filamentous objects, for example.

QUANTIFOIL® Holey Carbon Films (continued)

QUANTIFOIL® with Square Holes

QUANTIFOIL® with square holes and relatively narrow bars can be used in EM to support a thin carbon film, which by itself is too fragile to span a grid square. Alternatively, this holey film can directly support an object larger than the holes.

QUANTIFOIL® type	Hole size in µm	Spacing in µm	Period in µm
S 7/2	7	2.0	9
S 35/5	35	5	40
S 35/10	35	10	45

QUANTIFOIL® S 7/2 constitutes an optimum between a maximum of open area on the one hand, and mechanical stability on the other hand.

QUANTIFOIL® with Different Hole Shapes

QUANTIFOIL® Multi A is a holey film, which consists of various pattern hole sizes, shapes and arrangements is repeated. In addition to round holes, the pattern includes ovalshaped ones, which appear round at high tilt angles (~70°). The diameters of the round holes are about 1, 1.4 and 2µ, and the bar widths range from 0.5 to 4µ. The oval holes in the foil have a dimension of 8 x 2µ and 4 x 1µ.

QUANTIFOIL® with Hexagonal Geometry

This type of QUANTIFOIL is meant for slot grids. It was especially designed for supporting serial thin sections. It offers an optimum between mechanical stability on the one hand and background-free area on the other hand. The foil is thin enough to allow those parts of the sections that lie on the bars to be interpreted. In this way, the information in the sections can be interpreted to the maximum.

QUANTIFOIL® Hex 15 A foil with hole size of 26µm (diameter of inscribed circle) and a repeating distance of 41µm, the side length of the holes and the bar width are 15µm.

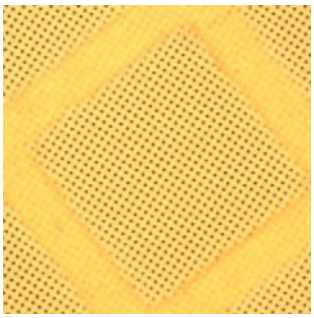
UltrAuFoil™ Holey Gold Films



These newly developed ultrastable gold supports for electron cryomicroscopy will reduce the movement of frozen specimens during imaging. This improves image contrast and quality, leading to better 3D reconstructions with less data.

During imaging at cryo-temperatures, traditional carbon supports move, particularly at the beginning of irradiation. This movement blurs images and makes it difficult to determine the structures of small and challenging molecules.

Using UltrAuFoils™, designed at MRC's Laboratory of Molecular Biology by Dr Christopher J. Russo and Dr Lori A. Passmore and produced by Quantifoil Micro Tools, specimen motion can be reduced significantly. (For details see: Ultrastable gold substrates for electron cryomicroscopy, Science, 2014, Vol. 346 no. 6215 pp. 1377-1380).

Characteristics of UltrAuFoil™

Thickness of Gold Foil	about 500 Å
Structure of Gold Foil	regular square array of micrometer-sized circular holes

FREQUENTLY ASKED QUESTIONS ABOUT...
UltrAuFoil™ Holey Gold Films

Why is the foil made of gold? *Because it is a highly conductive, nonoxidizing, radiation-hard material whose surface is chemically inert and biocompatible.*

Why is the foil 500 Å thick? *400-500 Å is optimal because it minimizes motion as much as thicker layers but still gives thin ice films under typical blotting conditions. Below 400 Å, the performance of the gold support foils begins to degrade.*

Why is the TEM grid made of gold? *Using the same metal eliminates differential thermal contraction during cooling of the sample and therefore prevents changes in the geometry and tension of the support foil.*

How should I store the UltrAuFoils™ and within which time should I use them?

The UltrAuFoils™ like our other products should be stored in a grid storage box in a dark, cool and low-humidity environment. Generally there is no date of expiry, but we recommend to use them within two years.

Do I need to modify the UltrAuFoils™ before use? *No, they are ready for use when delivered. They can be made more hydrophilic using standard glow discharge and plasma systems or other gold surface treatments.*

How do I set up the beam for data collection? *Currently, the recommended electron beam geometry is circularly symmetric beam, centered on the hole, which encompasses a small region of the support around each hole. The micrograph is taken in the center of the hole.*

How do I focus using UltrAuFoils™? *Since there is no amorphous material in the gold support structure, Thon rings cannot be used to focus. As discussed in the publication, several other options are available, but the two simplest are:*

1. *Turn on beam tilt wobble and minimize the image shift.*
2. *Look for the diffracted beams at the edge of a hole with the objective aperture removed. When the shift between the diffracted beams and the crystals of gold is minimized, the foil is in focus.*

How do I correct the astigmatism? *We recommend using a calibration specimen to correct the stigmation and beam tilt prior to collecting data on UlrAuFoils™.*

Can I use automated data collection methods? *Yes, automated data collection has been successfully tested on UltrAuFoils™ using beam tilt to focus.*

Are UltrAuFoils™ fragile? *No, they are similar or less fragile than traditional carbon foils. But if mishandled with tweezers or broken during freeze plunging, the stability of the support may be severely degraded. We recommend collecting data only from squares where the foil is uniform and intact.*

Can I add a continuous film of amorphous carbon? *Yes. Standard float transfer methods work fine for transferring thin films of carbon onto UltrAuFoils™.*

- Improved adhesion and orientation of proteins, nucleic acids and antibodies
- TEM grid preparation for nanoparticle studies

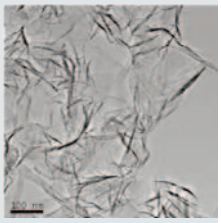
Graphene Support Films for TEM

Overview

Graphene is a single atomic layer of carbon atoms tightly packed in a two-dimensional honeycomb lattice. This novel material is atomically thin, chemically inert, consists of light atoms, and possesses a highly ordered structure. Graphene is electrically and thermally conductive, and is the strongest material ever measured. These remarkable properties make graphene the ideal support film for electron microscopy.

Potential Applications:

Biodevices
Single Molecule Gas Detection
Graphene Nanoribbon Integrated Circuits
Transparent Conducting Electrodes
Ultracapacitors



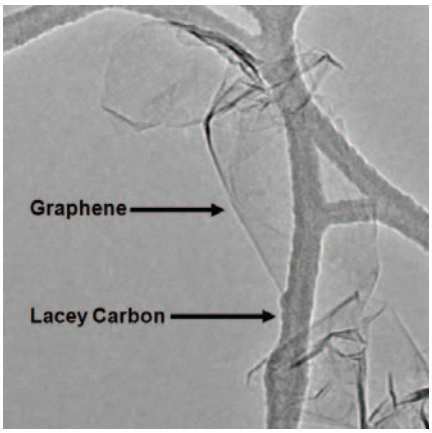
A typical low-magnification TEM image of crumpled and randomly oriented large-area graphene sheets suspended on a lacey carbon TEM grid.

Synthesis

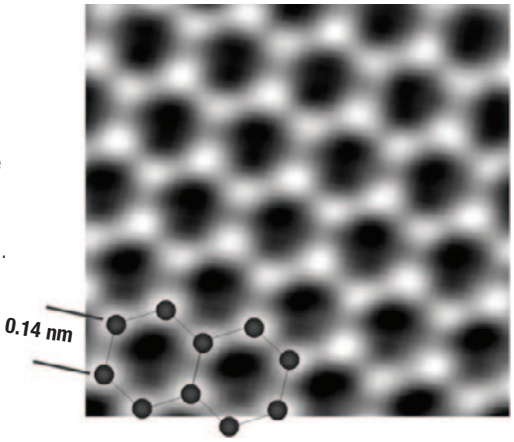
the substrate-free gas-phase method

Graphene is a single atomic layer of carbon atoms tightly packed in a two-dimensional honeycomb lattice. The novel material has generated great interest throughout the scientific and technological community because of its remarkable properties and numerous potential applications. However, obtaining pure and highly ordered graphene has been a challenge. Small quantities of ultrahigh-quality graphene have been isolated through an unwieldy and time-consuming process involving the mechanical exfoliation of highly oriented pyrolytic graphite. Alternative methods require substrates or graphite to create atomically-thin sheets, and these techniques involve multiple steps, expensive substrates, or non-ambient conditions. Furthermore, the sheets produced by these alternative methods exhibit defects, disorder, and oxygen functionalities that have a detrimental effect on the properties of graphene.

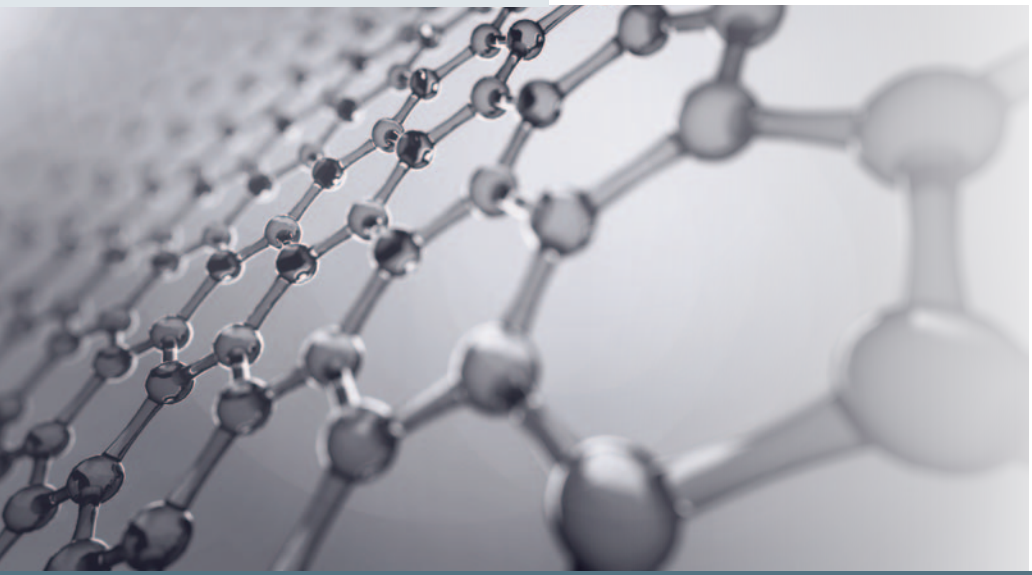
The substrate-free gas-phase method is the first and only process that can synthesize ultrahigh-quality graphene in a single step, without the use of substrates or graphite [1]. Graphene sheets are created through the delivery of liquid alcohol droplets directly into atmospheric-pressure microwave-generated plasmas. Extensive characterization of the synthesized graphene has proven that the sheets are oxygen-free and exhibit a highly ordered structure [2]. The graphene produced by this unique method can immediately be utilized for graphene applications.

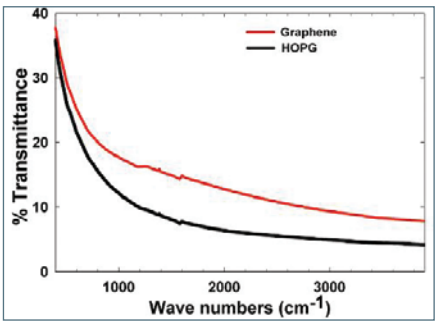


A typical TEM image of graphene sheets freely suspended on a lacey carbon TEM grid.



An atomic-resolution image of a clean and structurally perfect graphene sheet synthesized by the substrate-free gas-phase method. Individual carbon atoms appear white in the image.





Elemental analysis by FT-IR reveals that the synthesized graphene sheets are free of detrimental oxygen functionalities. The FT-IR spectrum of synthesized graphene is similar to that of highly oriented pyrolytic graphite (HOPG).

Graphene Support Films for TEM (continued)

Application

Direct imaging of soft and hard nanomaterials

The interfaces between soft and hard nanomaterials have been the subject of extensive research.

Nanoparticles coated with molecular layers have been shown to self-assemble into novel structures that could potentially be used in electronics, sensors, and photonics. Self-assembly is influenced by the nature of molecular coatings and thus more detailed characterization of these soft materials is needed.

However, imaging surface molecules and their interfaces with nanoparticles at the atomic scale is a significant challenge. The transmission electron microscope (TEM) imaging of functionalized nanoparticles has been attempted.

However, it has not been possible to observe molecular surface layers and their interfaces with nanoparticles at the atomic level. Modern aberration-corrected TEMs can produce atomic-resolution images of soft and hard nanomaterials. However, conventional TEM support films (e.g. ultrathin amorphous carbon) limit the capabilities of these advanced microscopes because they contribute to overall electron scattering and diminish the contrast of low-atomic number specimens. The TEM imaging of the interfaces between soft and hard nanomaterials therefore requires better support films that have a lower dynamical interference with an imaging object [3].

Graphene is the ideal TEM support film. The material possesses a highly ordered structure and is atomically thin, chemically inert, structurally stable, and electrically and thermally conductive. The ultrahigh-quality graphene produced by the substrate-free gas-phase method [1, 2] has enabled the unsurpassed TEM imaging of organic molecules and the interfaces between soft and hard nanomaterials. The pure and highly-ordered sheets were used as a near-invisible support film to directly image the atoms in a gold nanoparticle and its surrounding citrate coating [3]. The results showed that the synthesized graphene can be used to directly observe nanoparticles functionalized with a diverse range of molecular coatings, such as proteins and DNA

We offer ultrahigh-quality graphene that is produced through the substrate-free gas-phase method[1]. The graphene created by this technique possesses a highly ordered structure that is composed of 99% carbon by mass (1% hydrogen)[2]. This graphene was used to directly image gold nanoparticles and their organic surface molecules in both conventional and atomic-resolution TEMs at a level that greatly surpasses any current TEM support film[3].

Our graphene provides an invisible, crystalline background that enables the unrivaled TEM characterization of organic and inorganic nanomaterials.

Ordering Information

Graphene products come available in five different ways, allowing you to choose which is best for you

a) As a solution of 0.1 mg Graphene in 1 ml of Ethanol. A homogeneous solution will take less than 30 seconds to create by sonicating the Graphene-solvent mixture. One is able to coat their own grids using this solution.

b) As Graphene-enhanced lacey carbon TEM grids. 200 and 300 mesh. These grids are created by coating our existing lacey carbon grids with graphene. Through a unique drop method, solution is dispersed onto the Lacey Carbon Grid.

c) As dry, synthesized Graphene powder, 1 mg.

TEM SUPPORT FILMS

Graphene Support Films for TEM (continued)

Graphene on Lacey Carbon 300 Mesh Copper TEM Grids

CAS No. 7782-42-5

Characteristics

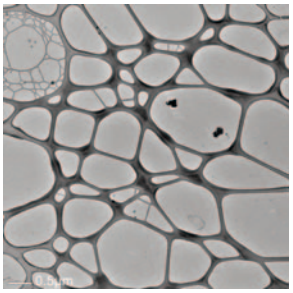
1. Four thicknesses of CVD graphene. Available in either 1, 2, 3-5 or 6-8 layers.

2. TEM Substrate: Lacey carbon support film on 300 mesh copper TEM grid.

3. Graphene coverage of the TEM grid is better than 75%.

Appearance

The graphene film appears as a near-transparent to light-grey film on the surface of the Lacey Carbon mesh on a red-brown colored copper TEM grid.



Low magnification TEM image of single-layer graphene on lacey carbon film. Typical grain size is in the region of 2-3 µm

Specifications

Characteristics

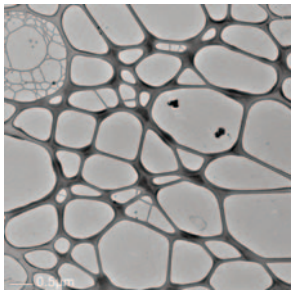
1. Four thicknesses of CVD graphene. Available in either 1, 2, 3-5 or 6-8 layers.

2. TEM Substrate: Microporous Copper TEM Grids with Beryllium-Copper Support Aperture.

3. Graphene coverage of the TEM grid is better than 75%.

Appearance

The graphene film appears as a near-transparent to light-grey film on the surface of the red-brown microporous copper TEM grid. For support, the TEM grid is attached using epoxy to a gold-colored beryllium-copper disk with a 2 x 1 mm aperture.



Low magnification TEM image of single-layer graphene on lacey carbon film. Typical grain size is in the region of 2-3 µm

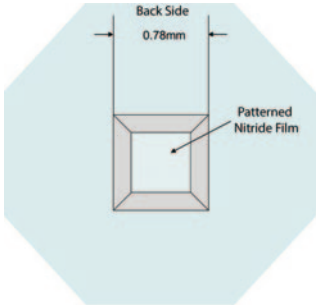
Graphene Support Films for TEM (continued)

Graphene on Silicon Nitride TEM Grids (2.5 µm holes)



Characteristics

1. Four thicknesses of CVD graphene. Available in either 1, 2, 3-5 or 6-8 layers.
2. TEM Substrate: 200 µm thick 3.0mm hexagonal silicon substrate with a 0.5 x 0.5 mm aperture and 200 nm thick silicon nitride membrane with approximately 6,400 2.5 µm holes.
3. Graphene coverage of the TEM grid is better than 75%.

Appearance

Solid hexagonal disk with a greenish hue. The graphene film appears as a near-transparent to light-grey film on the surface of the microporous Silicon Nitride membrane.

Graphene on Ultra-Flat Thermal SiO_2 Substrate

Characteristics

1. Four thicknesses of CVD graphene. Available in either 1, 2, 3-5 or 6-8 layers.
2. TEM Substrate: The Ultra-flat Thermal SiO2 Substrate consists of a 200 nm thermally grown SiO2 film on an ultra-flat silicon wafer with a normal thickness of 675 µm. The size is 5 mm x 5 mm.
3. Graphene coverage of the TEM grid is better than 75%.

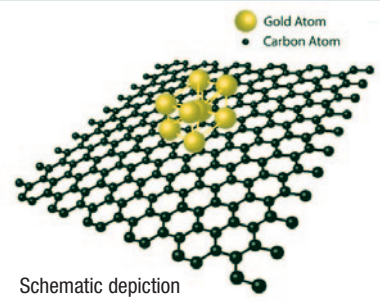
TEM SUPPORT FILMS

Graphene Oxide Support Films for TEM

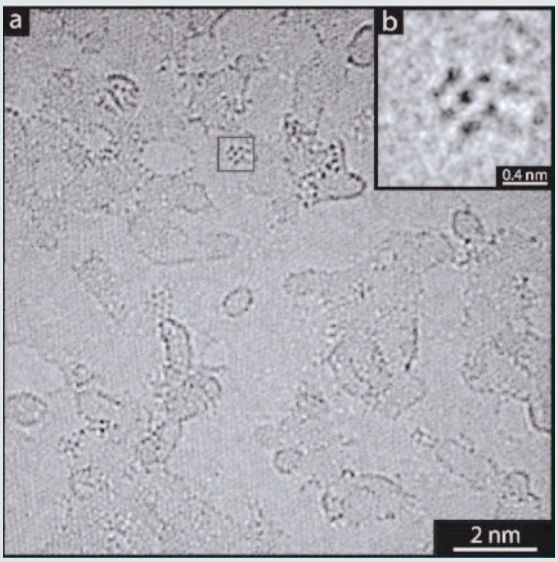
Graphene Oxide Membranes

A Scalable and Efficient Application of 2D Materials



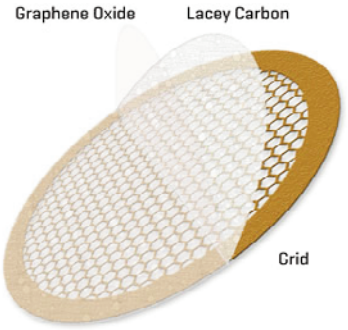
Schematic depiction of image b (below) in 3D. Adapted from Bosch-Navarro.

Since the first report on producing the two-dimensional (2D) material graphene in 2004, there has been considerable time and money invested into developing new graphene-based technologies. These aim to exploit the remarkable properties of graphene including its strength and electrical- and thermal- conductivity. At a basic level, transmission electron microscopy (TEM) image contrast is caused by the scattering of electrons and is dependent on the thickness and composition of the sample material. The ultimate thinness of graphene, combined with the low atomic number of carbon, provides the ideal blueprint for a low-contrast TEM support. Producing graphene and transferring onto a TEM support grid is difficult to carry out at large scale and high yield. A simpler, cheaper, and higher yield production method uses graphene oxide, a 2D material similar to graphene. Graphite is reduced using a strong oxidising agent, and the oxygen functionalities introduced render it hydrophilic, allowing it to be easily dispersed in water, as well as other organic solvents. Controlled sonication of the water-dispersed material allows finely-tuned exfoliation of the graphene oxide, which in turn allows samples, including TEM supports, to be coated in single or few-layer graphene oxide. These flakes possess the low contrast benefits of graphene, which, combined with the efficient production of graphene oxide, make it ideal as a cheap, high-yield TEM support.



a) A high-resolution TEM image showing gold nanoparticles dispersed across modified graphene-oxide.
b) Magnified image of red-box area in image a, showing single gold-nanoparticles with atomic resolution.

Graphene Oxide TEM Support Films



Graphene Oxide (GO) support film is a super thin (<1nm), naturally hydrophilic layer placed over the Holey, Lacey or Quantifoil support film on copper or gold grids. Pre-treatment of GO Support Films is unnecessary - by default, the hydrophilic surface spreads particles evenly across the grid. A hydrophobic surface can be achieved by heating in the air. Note: plasma cleaning or glow discharge will damage the support film.

Features

- **Works well with Holey Carbon, Lacey Carbon and Quantifoil grid types, effectively spanning the gaps**
- **Less expensive to produce due to complexity of graphene manufacturing**
- **Better background contrast than graphene, results in higher resolution**
- **Nearly transparent in electron beam**
- **Barely visible under optical microscopes**
- **Regular batch checking ensures correct coverage of monolayers**

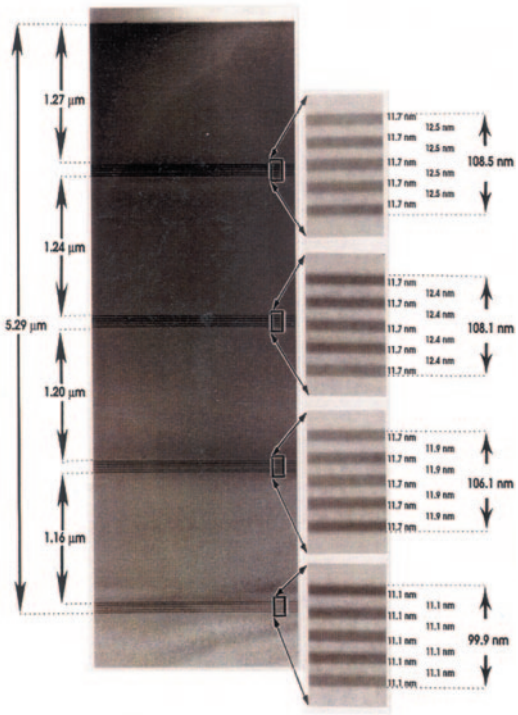
MAGICAL® TEM Calibration

The MAG*I*CAL® performs all major TEM calibrations:

- **All TEM magnification ranges**
- **Camera constant**
- **Image Diffraction Pattern Rotation**
- **Directly traceable to a natural constant**



MAG*I*CAL® consists of an ion milled cross section of a silicon single crystal consisting of a series of atomically flat layers of Si and SiGe, which have been grown epitaxially by MBE (molecular beam epitaxy). When the calibration structure is viewed in a TEM, it appears as a series of light and dark layers where the layer thicknesses are accurately known. The calibrated thickness measurements of these light (silicon) and dark (SiGe) layers are based on careful TEM measurements of the <111> lattice spacing of silicon, which is visible on the calibration sample itself, and are supported by x-ray diffraction measurements. The layer spacing are designed so that the sample can be used to calibrate the entire magnification range in a TEM, from 1,000x to 1,000,000x. As the sample is also a single crystal of silicon, the calibrations requiring electron diffraction information such as the camera constant and image/diffraction pattern rotation can also be performed easily and unambiguously. One single calibration sample can therefore be used to provide all three of the major TEM instrument calibration at all magnifications and all camera lengths.

For a complete reference and technical information on MAG*I*CAL™, see our website.

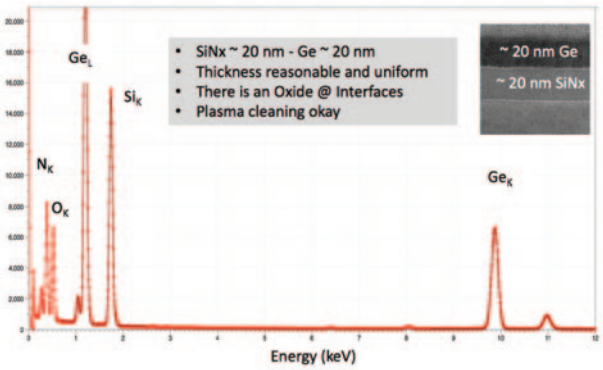
EDX/XEDS Calibration TEM Window Grid

Suspended germanium provides a unique calibration standard for x-ray energy dispersive spectroscopy.



Since Ge is not typically found in TEM columns, the calibration samples provide a material that cannot be mistaken for instrument components and their signal peaks. The regime in which system peaks normally occur [2-9 keV and 11-20 keV] is devoid of peaks from the Ge.

The Ge is suspended across two micron pores that are patterned on a grid of 20 nm thick silicon nitride.

The single 500 x 500 micron window is compatible with high tilt angle tomography, since at 70 degrees of tilt, the thin and beveled 100 micron silicon frame allows you to use a ~50x50 micron region within the center of the window from any rotational orientation.

These EDX calibration standards were developed in partnership with Dr. Nestor J. Zaluzec from the Electron Microscopy Center and the Center for Nanoscale Materials at Argonne National Laboratory.

Applications

- Detector energy axis and energy resolution calibration
- Detector Window Transmission Evaluation
- Detector solid angle measurements
- Electron optical instrument system peak measurements
- Specimen holder penumbra measurements

Specifications

20 nm thick germanium (Ge) coating on microporous 20 nm thick, low-stress silicon nitride (SiN)
Two micron pores on 1:1 pitch grid pattern
100 micron thick frame, fits 3 mm sample holders
(1) 500 x 500 micron window

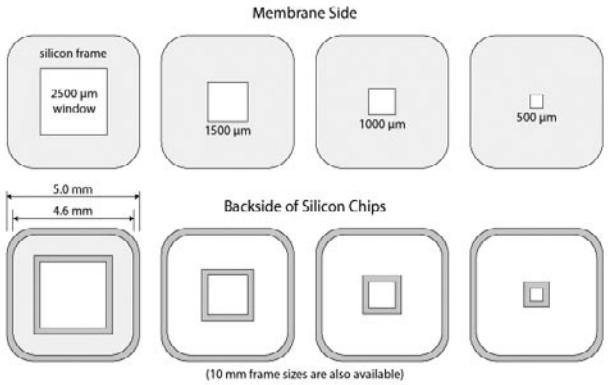
X-Ray Windows, Square Frame

Ideal substrates for x-ray microscopy and x-ray spectroscopy techniques.



State-of-the-art manufacturing and expert engineering allow for competitive prices of these windows. Made in the USA, these X-Ray windows are entirely plasma cleanable to remove organic contamination.

Flat, uniformly deposited films provide consistent backgrounds with low field-to-field variability and high x-ray transmission.

Available in two membrane types:

Silicon Nitride: Low-stress LPCVD Silicon Nitride membranes are mechanically strong and well-suited for high temperature and differential pressure environments

G-FLAT™ Silicon Oxide: Proprietary wrinkle-free G-FLAT™ Silicon Oxide membranes are well-suited for correlative optical and x-ray microscopy and analyses requiring a nitrogen-free background

These membranes are ideally suited for biological imaging studies, with a glass-like hydrophilic surface.

Ordering Information

G-FLAT™ Silicon Oxide X-Ray Windows

- 310 micron thick frame
- Unique G-Flat™ wrinkle-free Silicon Oxide film
- Compatible with ultra-high vacuum (UHV) applications (300nm Membrane)
- Non-Porous

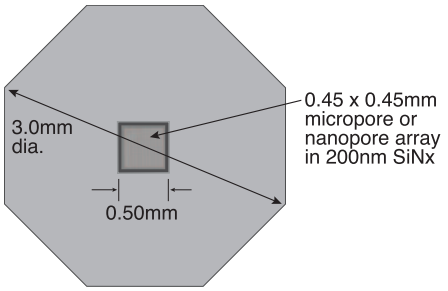
Holey Silicon Nitride TEM Window Grids

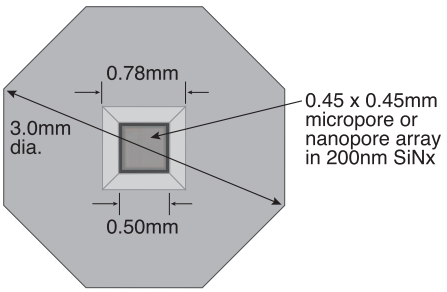
State-of-the-art support film.

This latest addition to our line of TEM Window Grids is manufactured using advanced MEMS technology to produce a unique 500 x 500 micrometer aperture with 200nm low-stress silicon nitride membrane.

Available with square holey pattern or 5 x 5 indexed array with hexagonal holey film.



Front Side



Back Side

Features

- Resistant to acids, bases, and solvents.
- Can be easily plasma-cleaned to remove organic contamination.
- Tolerate high-temperature experiments and imaging up to 1000°C.
- Provide a carbon-free background.
- Packaged under cleanroom conditions.

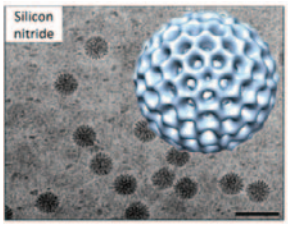
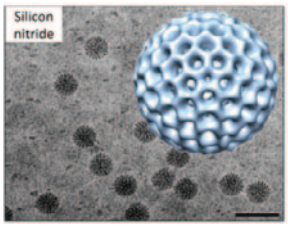
76043-25

76043-21

76043-23





"Our initial findings indicate that viral particles prepared on Cryo-SiN, exhibited greater contrast in comparison to those prepared on holey carbon films under the same conditions. As a result, we were able to calculate 3D reconstructions of viral particles prepared on Cryo-SiN using a fraction of the images required for samples prepared on holey carbon films."

Tanner et al. Microscopy & Microanalysis Abstract, 2013

Silicon Nitride Lift-Out TEM Windows

Low-stress silicon nitride for lift-out applications

Available with or without gold contacts.

State Of The Art — Our expert engineering and MEMS fabrication processes allow us to provide these one of a kind silicon nitride lift-out grids.

Open Half-Grid Shape — Our Silicon Nitride Lift-Out TEM Windows feature a large, robust window with a freely suspended side along one length of the window, providing an easily accessed edge for sample preparation and thinning to electron transparency (e.g. 50 nm or less).

Ready To Use Gold Contacts — 200 nm thick gold contacts for sample electrical biasing or heating are formatted for FIB-based sample preparation methods.

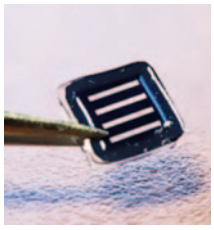
Porous Membrane Chips

Nanoporous, Microporous and Microslit.



4-slot Membrane Chip

Our Porous Membrane Chips are available in a range of membrane types and pore sizes and shapes to suit a variety of applications.

Nanoporous Silicon Nitride — Proprietary membranes that are 100 nm thick that have average 50 nm diameter pores and 20% porosity, with one, two or four membrane/chip formats, with high-resolution imaging and separation properties.

Microporous Silicon Nitride — Robust membranes that are 400 nm thick and have either 0.5, 3 or 8 µm diameter pores and high (20%) porosity, suitable for more demanding applications.

Microslit Silicon Nitride — Novel rectangular prism-shaped pores in robust 400 nm thick silicon nitride membranes with 10% porosity, suitable for separation applications.

G-FLAT™ Silicon Oxide — Proprietary and optically transparent membranes for high-resolution imaging applications, available with either 0.5, 3, 5 or 8 µm diameter pores and low (5%) or high (20%) porosity.

Plasma Compatible — All of our Porous Membrane Chips can be treated with oxygen or oxygen-argon plasma for surface activation and/or removal of any organic contamination.

Device Integration — Our Porous Membrane Chips can be easily integrated into microfluidic-type applications where suspension of materials of interest across a permeable and transparent membrane is desired.

Ultrathin Membranes — Flat, uniformly deposited films and 100 nm to 400 nm thick suspended membranes provide consistent backgrounds with low field-to-field variability and high optical transparency.

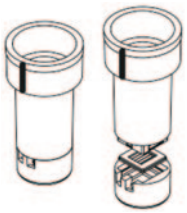
SepCon® Spin Vials for Particle Separation & Concentration

NanoPorous and Microslit Membranes for high resolution imaging.

Features

- **Ability to capture particles of different sizes, either nanoparticles with 45 nm pores or microparticles and cells with 0.5 and 1 µm microslits.**
- **Easy-to-follow protocol using standard microcentrifuges, with 5 to 20 minute processing times.**
- **Porous Membrane Chips that are easily removed from spin columns for high-resolution optical and electron microscopy imaging**



Clean-up particle preparations and easily image captured materials that remain on highly transparent and ultrathin membrane.

Capture Multiple Particles

- NanoPorous Chips: pore size is 45 nm
- Microslits: slit sizes of either 0.5 or 1 µm
- Capture a range of microparticles and cells

Save Time

- 5 to 20-minute processing time
- Easy to follow protocol using SepCon Spin Vials and standard Microcentrifuge

Porous Membrane Chips

- Easily remove membrane chips for high-resolution optical and electron microscopy imaging

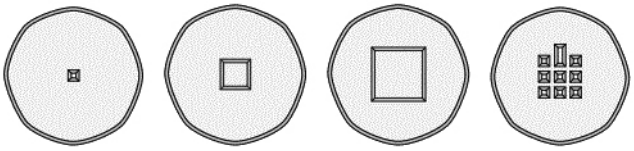
TEM WINDOW GRIDS

Silicon Nitride TEM Window Grids

Silicon Nitride TEM Window Grids perform well under harsh lab conditions.



Silicon frames are 100µm thick. Grids fit standard 3mm holders and most double tilt holders. They come in clear gel-boxes for simpler sample preparation.

Features

- **Plasma Cleanable —** can be vigorously plasma cleaned to remove organic contamination
- **Field to Field Uniformity —** Less than 0.5 nm variation in film thickness across an entire production log, not just a single window grid
- **Tolerates temperatures above 1000°C —** Supports use in environmental TEMs where dynamic processes are observed at high temperatures
- **Withstands Harsh Conditions —** Provides an ideal balance of imaging resolution, chemical stability and mechanical strength
- **Incorporates LPCVD, low-stress (~250MPa), non-stoichiometric silicon nitride —** Provides flat, insulating and hydrophobic surfaces

Recommended Use

High Resolution Imaging:	5nm	**76042-43**, 1 square (25x25µm) **76042-44**, 9 squares (50x50µm) **76042-45**, 2 slots (50x1500µm)*
Robust, Increased High Resolution:	10nm	**76042-46**, 9 squares (100x100µm)
Everyday Imaging:	20nm	**76042-49**, 1 square (500x500µm) **76042-50**, 9 squares (100x100µm)
Demanding Conditions:	50nm	**76042-53**, 1 square (100x100µm) **76042-52**, 1 square (500x500µm) **76042-51**, 1 square (1000x1000µm) **76042-50**, 9 squares (100x100µm)
Materials & Cryo-EM Suspension:	Microporous	**76042-41**, 1 square (500x500µm) **76042-40**, 1 square (500x500µm)

*Coated with 1 nm of ultrahigh purity carbon to minimize charging

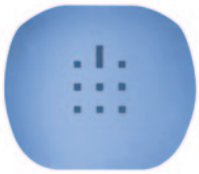
Silicon Dioxide TEM Window Grids



Engineered to be easier to handle.

By making the grids slightly narrower users now have easy access to grids in TEM holders. No more fumbling with tweezers while trying to pick up or put down grids. The new TEM Window grid shape is still compatible with all standard holders. TEM Window dimensions are 2.9mm in diameter and 100µm thick.

Features

- **Plasma Cleanable —** Can be vigorously plasma cleaned to remove organic contamination
- **Field to Field Uniformity —** Reduced variability
- **Tolerates temperatures above 1000°C —** Supports use in environmental TEMs where dynamic processes are observed at high temperatures
- **Withstands Harsh Conditions —** Provides an ideal balance of imaging resolution, chemical stability and mechanical strength
- **Incorporates stoichiometric silicon dioxide —** Offers the ability to analyze for nitrogen by EDX techniques

Specifications

100 micron thick frame, fits 3 mm sample holders

Non-Porous films are lightly wrinkled with approximately 5 microns or less deflection across 100 microns of travel. This is typically not problematic for high-resolution imaging.

GFLAT silicon oxide films are created by a proprietary process that uniquely results in flat, suspended silicon oxide membranes. These membranes are ideally suited for biological imaging studies, with a glass-like hydrophilic surface. These TEM Windows are essentially micro-scale glass cover slips.

Silicon Apertures

No-membrane frames

Our Silicon Apertures feature the same TEM window grid-style chip size but lack any suspended membrane so that there is a freely accessible opening through the chip frame.

Features

Background-free Imaging – Open apertures for free suspension of materials so that they can be imaged without intervening membranes

Plasma Cleanable – Silicon apertures can be vigorously plasma cleaned to remove organic contamination

Silicon Composition – Chip frames comprise P-type doped silicon

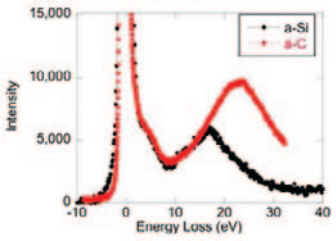
Pure Silicon TEM Windows

Pure Silicon sets these TEM windows apart from the rest

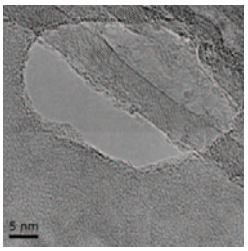
5nm, 9nm, 15nm, 35nm

Features

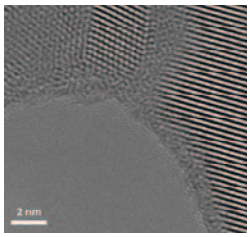
- **Nanometer Thinness —** Pure Silicon TEM Windows feature imaging windows with 5 to 35nm thickness, reducing background contribution and interference for higher contrast imaging. Most impressively, 5nm thick Non-Porous Pure Silicon TEM Windows are thinner than the thinnest commercially available amorphous carbon membranes.
- **Plasma Cleanable —** can be vigorously plasma cleaned to remove organic contamination, unlike traditional carbon grids
- **Field to Field Uniformity —** Non-Porous Pure Silicon TEM Windows are more consistently thin than carbon grids, reducing field-to-field variability. (Note: Porous windows do have inherent crystalline features, but feature background-free nanometer-scale pores).
- **Reduced Chromatic Blur—** In comparison to the thinnest commercially available amorphous carbon membranes, 5 nm Non-Porous Pure Silicon TEM Windows yield half the chromatic blur. This dramatic difference results from a two-fold reduction in inelastic scattering of electrons passing through the thinner membranes of Silicon TEM Windows. In turn, the reduced chromatic blur offers a potential two-fold improvement in imaging resolution.



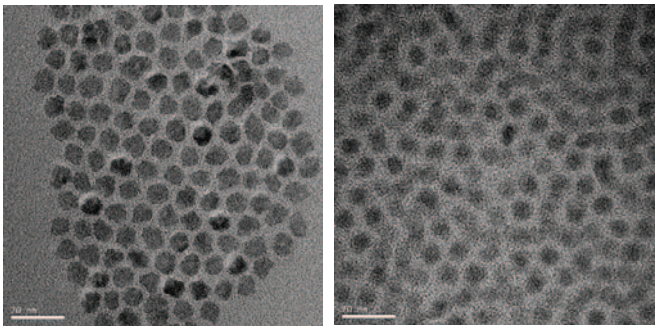
- **Nanometer-Scale Pores —** Pure Silicon TEM Windows are available as porous films with pores ranging from 5 to 50 nm in diameter. The pores allow simple and stable suspension of nanoscale materials for imaging without intervening background.



- **Silicon Composition —** The elemental silicon composition of TEM Windows remarkably increases stability at high beam currents and at high annealing temperatures. The Pure Silicon composition also introduces a minimal background signal, making elemental analyses of sample containing nitrogen and/or carbon possible by EDX and EELS.
- **Isolated Poly-Crystallinity —** The polycrystalline nature of porous Pure Silicon TEM Windows offers an internal calibration standard for x-ray diffraction studies. The isolated crystalline features also provides a convenient and reliable scale for high-resolution size measurements, well-characterized crystal lattice of silicon.



- **Hydrophilicity —** The hydrophilicity of both non-porous and porous Pure Silicon TEM Windows is tunable by plasma and/or ozone treatment making sample preparation easier, particularly for samples in aqueous solutions.
- **Increased Stability —** At high beam currents and high annealing temperatures (600°C for non-porous, >1000°C for nanoporous)
- **Silicon Composition —** Sputter-deposited, pure, intrinsic silicon
- **Minimal Background Signal —** Enables elemental analyses of samples containing nitrogen and/or carbon

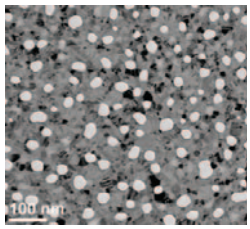


Lead Selenide nanoparticles on 5 nm non-porous Pure Silicon TEM Window (left) and conventional carbon film (right). Particles provided by Chris Evans, University of Rochester and imaged by Brian McIntyre, University of Rochester.

Options

Nanoporous — Using P30 membranes has made the Nanoporous TEM windows significantly more porous. Pore sizes have increased to include a range of pores from 10-60 nanometers in diameter.

Single Crystal — with <1-0-0> orientation, offers a very thin 35nm membranes for diffraction studies and other applications requiring uniform background from a single crystal film.



Nanoporous Low-resolution TEM image of a new P30 Nanoporous TEM Window

Non-porous — Non-Porous films are lightly wrinkled with approximately 5 microns or less deflection across 100 microns of travel. This is typically not problematic for high-resolution imaging.

Wet "Liquid" TEM Kit

Why K-kit?

K-kit meets all needs for Liquid TEM

1 Native State in Liquid

- **Available with undiluted solution.**
- **Preserve the original morphology and physical state in liquid**

2 In-situ Observation

- **Kinetic mechanism of metal growth or physicochemical reaction process in liquid can be in-situ observed with increased reaction time.**

3 Quantitative Analysis

- **Software of image recognition for nanoparticle size distribution analysis.**

4 Compatible with Versatile Microscopy Analyses

- **Applicable to TEM, FIB, and STEM.**
- **Available for EDX analysis.**
- **High resistance to most chemicals.**
- **Working temperature range from -40°C to 120°C.**

Patents being issued and publication:

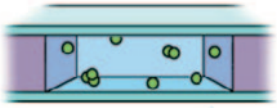
Window Length: 300µm, Width 25µm

Channel Height (H): **0.2 and 2.0 standard**
0.5, 1.0 and 5.0 available



H = 0.2µm, 0.5µm, 1µm, 2µm, 5µm

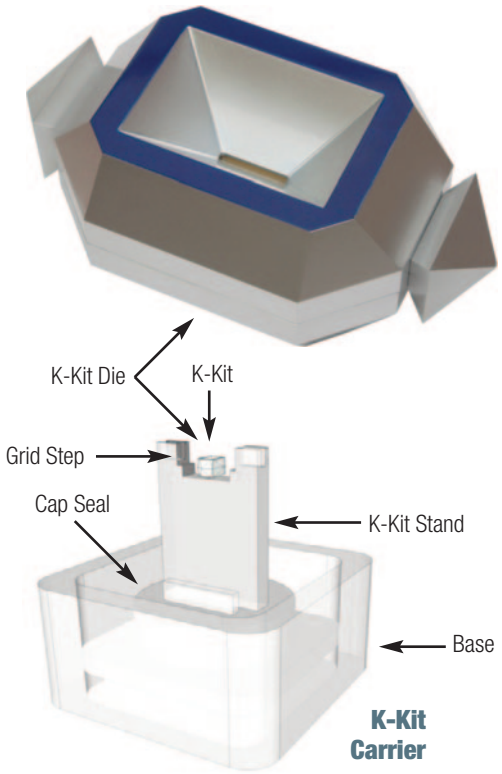
III K-kit

A Specimen Holder for Liquid Sample Analysis in TEM

Overview

K-kits are sample holders designed to facilitate convenient TEM observation of liquid samples, allowing nano-objects, aggregates, and agglomerates (NOAAs) in liquid samples to be characterized.

With vacuum compatible sealing of liquids in electron-transmitting thickness, K-kits are micro reaction chambers for countless experiments in materials, chemical, and biological research.

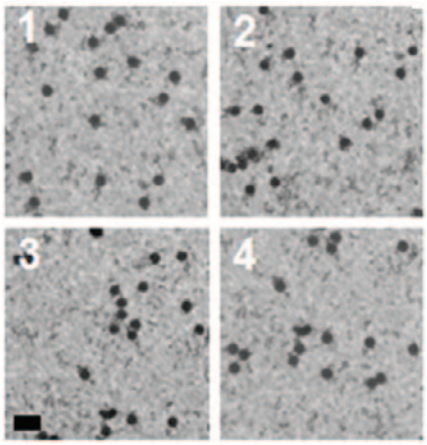


Features

- **Applicable for most TEM holder brands**
- **Strong structural reliability under vacuum**
- **Sealing glue compatible to many solvents**
- **Disposable**
- **Free of cross-contamination**
- **Easy to use**

Sample Analysis Comparison

K-kit **original physical state**



Conventional **aggregated after drying**

Wet and Thin Layer Mode of K-kit

The K-kit can be used in either Wet Mode or Thin Layer Mode.

Wet Mode: The loaded liquid sample is sealed and imaged using TEM in the native liquid environment.

Thin Layer Mode: A patented liquid drying protocol preserves the original morphology and physical state of nanomaterials with improved imaging resolution.

Sample Preparation	Wet Mode	Thin Layer Mode
Inner Status of K-kit	**With Liquid** 	**Dried** Imaging Resolution	Good	Excellent
Gap Size (Considered)	300~500nm	2000~3000nm
Particle Size (Loadable)	10nm~300nm	3nm~2000nm
Particle Shape	Keeping original	Potentially, could be deformed.
Chemical Reduction or Potential Damage by Electron Energy	High	Low
Possible States of K-kit	 Liquid fully filled	 Thin liquid layer on wall
	 Liquid partially filled	 Dry state

Now Liquid TEM is even easier...

K-kit Folding Grids

Streamline your preparation of liquid TEM samples with this new folding grid developed specifically for the K-kit. This low-cost single-use option eliminates the gluing and levelling steps required with a standard copper grid.

K-kit Accessories

NEW K-kit Folding Grids, **see page 67**

K-kit Holder

The K-kit Holder consists of an anodized aluminum header and a stainless steel handle. The K-kit carrier fits on the header (after removing the bottom compartment). When the notch on the side of the header fits over the horizontal bar on the Loading Stage (see below), the K-kit on the carrier attached on the header will be just above the liquid sample.

Cat. No.	Description	Qty.
K7263	K-kit Holder	each

Needle Pen

The Needle Pen is designed to facilitate the K-kit gluing operation. It has a thin needle 3.0 mm long and 0.27 mm in diameter. The thin needle makes it convenient to pick just enough glue (of the order of 0.1µl[x]) for sealing the channel openings and (around 1µl[x]) for mounting the copper grid. The needle is made of stainless steel. It is strong, yet slightly flexible, suitable for the job.

Notes:

It is important to keep the needle free of residue glue. Please wipe the needle clean right after each use. It will be practically impossible to clean the needle once residue glue on it cures.

The needle is held in place in the pen by a set screw on the side of the pen. A replacement needle and a small Allen key are provided with each Needle Pen. The needle is sharp. Please handle with care.

Cat. No.	Description	Qty.
K7265	Needle Pen	each

Sample-Loading Stage

The Loading Stage consists of an anodized aluminum body. It has a horizontal bar in a recess on the side and a hole in the middle to house the Liquid Stage, which is a removable stainless steel rod. The removable design is for easy cleaning. The horizontal bar defines the rotational axis for the K-kit Holder, which has a notch on the header to fit on the horizontal bar.

Cat. No.	Description	Qty.
K7264	Sample Loading Stage	each

Gluing Stand

The Gluing Stand has a stainless steel base and an anodized aluminum header, which is much like the header on the K-kit holder, without the notch on the side. The Gluing Stand keeps the K-kit carrier in place for gluing work.

Cat. No.	Description	Qty.
K7266	Gluing Stand	each

Channel Opener

The Channel Opener is used to remove the channel tips, while the K-kit stays on the carrier. It's made of anodized aluminum with a cut-off slot design at one end.

Cat. No.	Description	Qty.
K7269	Channel Opener	each

Copper Grids

Ten pieces of Copper Grid per pack.

Cat. No.	Description	Qty.
K7270	Copper Grid	10/pk

Accessory Box

The Accessory Box contains sealing and mounting glues, four plastic sticks, and spare parts, including a spare needle, an Allen key for the Needle Pen, a Channel Opener, and two Liquid Stages. (The label can be redesigned.)

Cat. No.	Description	Qty.
K7267	Accessory Box	each

Starter Box

The Starter Box contains all of the essentials for K-kit loading. It consists of glues, a beaker, four stirring sticks, and two stainless steel thin needles.

Cat. No.	Description	Qty.
K7268	Starter Box	each

Glue Box

The Glue Box contains sealing and mounting glues and stirring sticks.

Notes: Glue capsules will now have a tin foil seal on the bottle mouth for shipping. Sometimes during shipping, the glue could become stained and dried on the cap or bottle mouth of the capsule. Sometimes, the Torr Seal glue will have a thin oil-like layer on the surface. This will not affect anything and is normal. Please stir first to mix evenly.

K7271	Slide-Glass Pack	6/pk

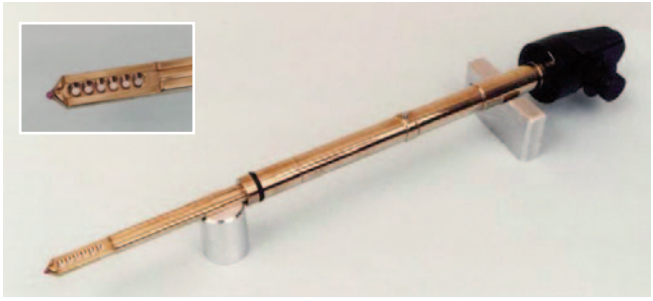
TEM HOLDERS

JEOL 2-Position Single Tilt Holder

A single tilt two-grid sample holder. Grids are held in place by easy to remove circlips. Comes complete with loading stand, circlip extraction tool, and is supplied in its own mahogany box.

Cat. No.	Description	Qty.
EMS017	JEOL 2-Position Single Tilt Holder	each

JEOL 2-Position Single Tilt Multi-Sample Holder

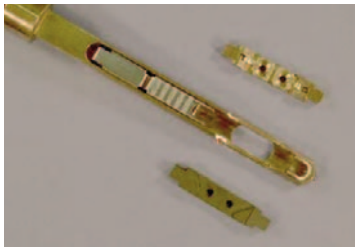


A single tilt multi-grid holder. Will accommodate 6 grids with an easy click stop reproducible movement between each specimen. It is ideal for scanning through serial sections or for comparing against a standard.

Grids are held in place by easy to remove circlips. Comes complete with loading stand, circlip extraction tool, and is supplied in its own mahogany box.

Cat. No.	Description	Qty.
EMS027	JEOL 2-Position Single Tilt Holder	each

JEOL 3-Position Grid Insert

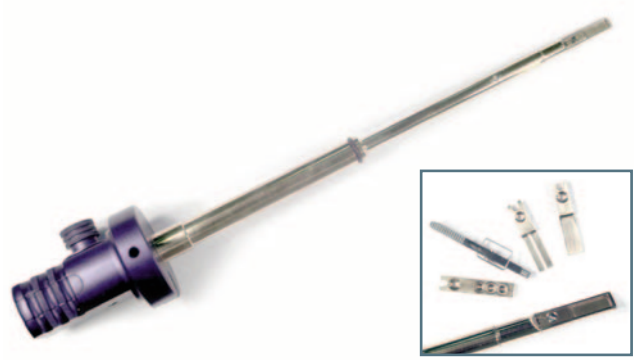


A three position insert which will fit standard JEOL 2 position holders as a direct replacement.

Specimens are held in place with our push fit, easy to use circlips. The circlip extraction tool, Cat. #**EMS016** is needed to install and remove circlips.

Cat. No.	Description	Qty.
EMS056	JEOL 3-Position Grid Insert	each

Philips Bulk Sample Holder for Compustage



A single-tilt multi-functional sample holder for use in SEM or TEM modes.

Includes slit serial section tip, 10 bulk, and a TEM 3.05 mm grid holder for use with TEM or STEM. Comes supplied in its own mahogany box, with a loading stand, and a circlip extraction tool.

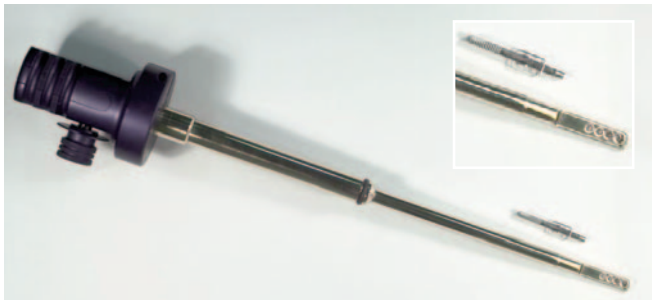
Cat. No.	Description	Qty.
EMS054	Philips Bulk Sample Holder for Compustage	each

Philips Single Tilt Single-Sample Holder

A single tilt single sample holder. Will accommodate 3 mm grids. Grids are held in place by easy to remove circlips. Comes complete with loading stand, circlip extraction tool, and is supplied in its own box. Suitable for 400 and non-compustage microscopes.

Cat. No.	Description	Qty.
EMS021	4-Position Multi-Sample Holder	each

Philips 4-Position Multi-Sample Holder



A single tilt multi-grid holder. Will accommodate 4 grids with easy reproducible movement between each specimen. It is ideal for scanning through serial samples or for comparing against standards.

Grids are held in place by easy to remove circlips. Comes complete with loading stand, circlip extraction tool, and is supplied in a mahogany box. Suitable for 400 and non-compustage microscopes.

Cat. No.	Description	Qty.
EMS020	Philips 4-Position Multi-Sample Holder	each

EMS25 TEM Grid Storage Box

The EMS25 is a small capacity grid storage box, designed as a low alternative to larger grid boxes where extra storage capacity is not required.

The box has a sliding cover, allowing access to 5 slots at a time.

Each diamond shaped hole is capable of storing a 3.05 mm or 2.3 mm diameter grid. Storage referencing is managed via recessed alpha numeric indexing on the sides of the box.

The box contains two side features, allowing for easier handling during specimen removal, as well as a matte strip for extra notation.

The EMS25 is also available with a unique number printed in blue on the face, code EMS25BN; batches with sequential numbers are available. Both boxes come with a durable 25 column card for record keeping.

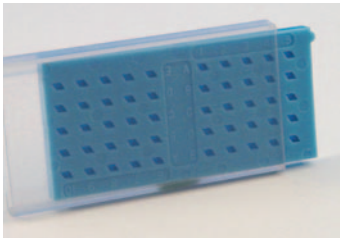
Our grid boxes are intended for use in both routine grid handling and for long term grid storage. Their compact flat shape and low cost make them well suited for the transportation of coated grid products and for the long term storage of catalogued specimens.

Specifications:

Size	56 mm (L) x 36 mm (W) x 6 mm (D)
Weight	9 grams
Materials	Base: ABS-PHAT (Acrylonitrile Butadiene Styrene + Anti-Static Additive) Cover: Clear Polycarbonate

Cat. No.	Description	Qty.
71159	EMS25 TEM Grid Storage Box, 25 Capacity	each
71159-10	EMS25 TEM Grid Storage Box, 25 Capacity	1 dozen
71159-20	EMS25 TEM Grid Storage Box, 25 Capacity, w/number	each
71159-30	EMS25 TEM Grid Storage Box, 25 Capacity, w/number	1 dozen

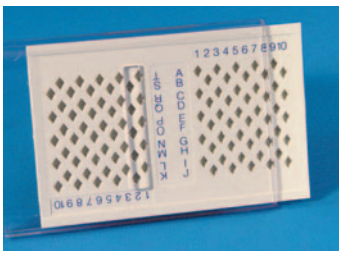
Grid Storage Box, 50 Capacity



Storage for 50 grids in deep diamond-shaped wells. All wells are identified. The base is resistant to organics and reactions can be carried out on grid-mounted samples in the wells. Complete with grid recording card. Measures: 3"(L) x 1 3/16"(W) x 5/16"(H) (77x40x8mm)

Cat. No.	Description	Qty.
71150	Grid Storage Box, 50 Capacity	each
71152	Grid Storage Box, 50 Capacity	1 dozen

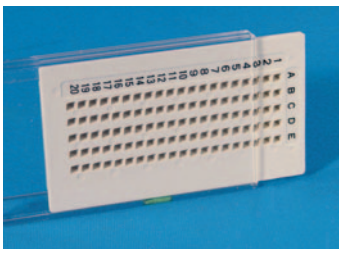
Grid Storage Box, 100 Capacity



100 grids can be stored in identified diamond-shaped wells for daily handling or long-term storage. Complete with grid recording card. Measures: 3 5/16"(L) x 2 5/16 (W) x 3/32"(H) (85x58x7mm)

Cat. No.	Description	Qty.
71140	Grid Storage Box, 100 Capacity	each
71142	Grid Storage Box, 100 Capacity	1 dozen

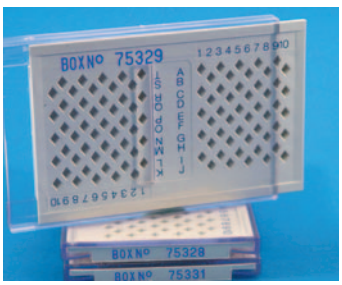
Grid Storage Box, 100 Capacity



A newly designed grid storage box similiar to the original LKB box. Made from a special plastic that minimizes static. Complete with grid recording card. Measures: 8cm(L) x 5cm(W) x7mm(T)

Cat. No.	Description	Qty.
71155	Grid Storage Box, 100 Capacity	each
71156	Grid Storage Box, 100 Capacity	1 dozen

Numbered Grid Storage Box, 100 Capacity



The standard 100 capacity grid storage box with a unique number printed on the face and on one end.

- **Eliminates the placement of the specimen grid in the wrong box.**
- **Easy retrieval of grid box from storage.**
- **Complete with grid recording card.**

Cat. No.	Description	Qty.
71137	Numbered Grid Storage Box, 100 Capacity	each
71138	Numbered Grid Storage Box, 100 Capacity	10/lot

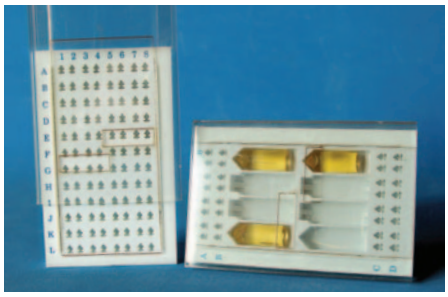
Multipurpose Electron Microscope Specimen Box – MEM Grid Box



A newly designed Grid Box with safety, ease and convenience in mind – this multipurpose electron microscope specimen grid box is one of the most desirable boxes on the market.

- Eliminates the chances of tweezers insertion damaging the grids – The 'tweezers slot' and 'grid slot' are in a separate location. The tweezers are only able to grip the edge of the grid enabling it to be picked up
- Grids stored no longer jump out of the box while you remove the cover – Between the body of the box and the sliding lid, there is a separate plastic cover, which allows for only four slots being exposed at a time
- The Grid Record Card is stored safely by insertion along the reverse side of the box
- MEM-96 – will able to store up to 96 grids
- MEM-32 – will able to store up to 32 grids with 8 Blocks
- Measures: 81mm L x 54mm W x 6mm thick

Cat. No.	Description	Qty.
71164-01	MEM-96 Grid Storage Box	each
71164-10	MEM-96 Grid Storage Box	10/pk.
71165-01	MEM-32 Grid Storage Box	each
71165-10	MEM-32 Grid Storage Box	10/pk.

TEM-Specimen Grid Box – SB50

This newly designed TEM grid storage box is for routine handling and long term storage of 50 standard size TEM grids. The ergonomic design overcomes the disadvantages of the more conventional 'sliding cover' design. This new box has a unique number on the face and on one end.

- The blue arrow at the 12:00 o'clock position indicates the park position for the cover when not it is not in use. This is a firm grip 'click' position and it cannot be moved accidentally, thus preventing spillage.
- The 50 diamond-shaped slots have an alphanumeric referencing system. Each box is supplied with an index record card for additional information.
- The clear cover can be rotated smoothly through 360° once the slight initial resistance of the park position has been overcome, exposing a maximum of 2 or 3 slots at any one time.
- The base material has anti-static properties. The clear cover has self-lubricating properties, which reduces friction, enabling the cover to move freely while remaining in close contact with the face of the base.
- Stackable — the base fits precisely over the face of another box.

Specifications

Size (mm)	75 (L) x 65 (W) x 6.5 (D)
Weight	22 grams
Materials	*Base:* ABS-PHAT (Acrylonitrile Butadiene Styrene + Anti-Static Additive) *Cover:* CAB (Cellulose Acetal Butyrate)

EMS Multifunctional Vacuum Desiccator

73879-01

Our versatile vacuum desiccator has been designed to be used in both SEM and TEM Applications. With the change of an accessory the desiccator is capable of being used with grids, pin mounts as well as Hitachi M4 Mounts.

The ability to store your grids and or mounts under vacuum eliminates any dust particles and contamination which may be airborne. The base desiccator may pump down to 10^{-3} mbar and can hold vacuum for up to one year.

The unit is made from Red Anodized aluminum and it measures 76 mm x 35 mm (3" x 1.4") and has a standard vacuum connection (¼") (6.35 mm) barb fitting.

The desiccators may be used with any laboratory pump or our **94588** series of pumps.

Features

- Versatile holder for the storage as well as shipping of samples
- Prevents oxidation
- Prevents dust and contamination of the grids and mounts
- Comes complete with an acrylic lid to enable visualization of samples

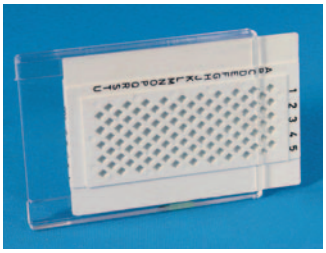
GRID PREPARATION SUPPLIES AND ACCESSORIES

Grid Storage & Transport (continued)

THE ORIGINAL LKB Grid Storage Box



For years, The LKB Grid Storage Box is the one that everyone is looking for. Now it is available again from EMS. The box is made from ABS (a copolymer of Acrylonitrile, Butadien and Styrene) which will not tolerate temperatures above 70˚C, while the lid is made of Polymethacrylate (Flexiglas, Perspex), which should not be exposed to temperatures above 45˚C. Neither the box or the lid will resist organic solvents. The box consists of 100 diamond shaped holes for storing up to 100 EM grids, either 3.05mm or 2.3mm in diameter. The box measures 3" (75mm)(L) x 2⅛"(55mm)(W) x ¼"(7mm)(H) and it comes complete with 10 index cards.

Cat No.	Description	Qty.
71147-01	LKB 100-Grid Storage Box	each
71147-12	LKB 100-Grid Storage Box	10/pk

EMS 50 and EMS 100 Capacity Inexpensive Grid Storage Boxes

The EMS50 and EMS100 TEM Grid Storage Boxes are used for the storage of TEM grids for routine grid handling, transport and long term TEM grid storage for standard grids that are 3.05mm in diameter.

The box has a simple number/letter combination printed on the side of the body. Dimensions for both boxes are: 3"(75mm) x 2⅛"(55mm) x ¼"(6.5mm) and they are anti static treated.

EMS Cryo Preparation Kit

Electron Microscopy Sciences is proud to introduce a cryo starter kit which includes all of the supplies necessary to begin Cryo EM. The kit includes a variety of our Cryogenic Grid Storage Boxes, Manipulation Tweezers and Gripper Tools, as well as our C-Flat Holey Carbon Cryo Grids. The Tweezers we are using are coated as well as anti-magnetic.

The kit comes with the following pieces in a small display box:

- Cryo Grid Box, Round, w/Lid
- Cryo Grid Box, Square, w/Lid
- Cryo Grid Box, Round, wo/Lid
- Cryo Grid Box, w/Pin Type Lid for FEI Vitrobot
- Cryo Grid Box, w/Pin Type Lid

GRID PREPARATION SUPPLIES AND ACCESSORIES

Grid Storage & Transport (continued)

EMS Cryo Pucks G2

Organized storage and transport for Cryo-EM specimen grids under cryogenic conditions.

We now offer a broad selection of kits and bundles to meet your needs.

- 12 wells per puck for Cryo Grid Boxes
- Each puck has a unique alpha-numeric code for easy identification
- Indexed wells for sample tracking
- Holds round Cryo Grid Boxes
- Puck depth accomodates pin type lid style Cryo Grid Boxes
- When using Cryo Grid Boxes with flat-style lids, you can store up to 24 Cryo Grid Boxes per puck
- Special tweezer slots allow easy and secure removal of Cryo Grid Boxes
- Shelved shipping Cane holds up to 8 pucks
- Shelved Storage Cane hold 10 packs
- Magnets for strong puck retention but easy removal
- 2D Barcoding and custom puck serialization for advanced sample tracking
- See-through, affixed lid retains liquid nitrogen during transfers to protect samples
- Lid-lock feature provides easy and secure loading
- 10 Unique puck colors available for easy identification (available upon request)

Limiting exposure to ambient conditions is recommended, but brief periods during puck placement and retrieval has not resulted in frost or ice accumulation.

Ordering Information

Contact us for ordering pucks in a specific color combination. Available colors include: Red, Blue, Purple, Grey, Black, Gold, Green, Violet, Brown, Orange.

III EMS Cryo Pucks G2 (continued)

EMS Cryo Pucks G2 **Facility HC35 Starter Set**

Includes:

- (100) G2 EMS Cryo Pucks
- (1) Shelved Puck Shipping Cane
- (10) Shelved Storage Cane
- (1) Angled Cryo-Tongs
- (1) Grasping Tongs
- (1) Puck Dewar and Insert
- (1) Cryo-EM Grid Box Tweezers
- (1) Screwdriver for Lid Lock
- (1) Puck & Cane Tracking Log Book
- (1) Barcode Reader

Cat. No.	Description	Qty.
71168-17	1-color	set
71168-18	rainbow	set

EMS Cryo Pucks G2 **Facility HC35 Advanced Set**

Includes:

- (100) G2 EMS Cryo Pucks
- (1) Shelved Puck Shipping Cane
- (10) Shelved Storage Canes
- (2) Angled Cryo-Tongs
- (2) Grasping Tongs
- (2) Puck Dewar and Insert
- (2) Cryo-EM Grid Box Tweezers
- (2) Screwdriver for Lid Lock
- (2) Puck & Cane Tracking Log Book
- (1) Barcode Reader
- (1) HC35 Dewar & Roller Base
- (1) CX100 Dryshipper and Case

GRID PREPARATION SUPPLIES AND ACCESSORIES

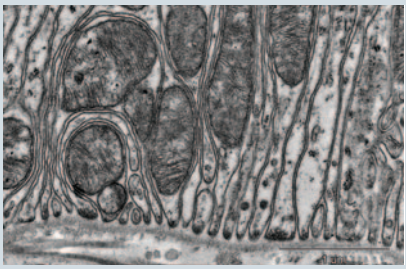
Grid Staining & Mounting

Overview

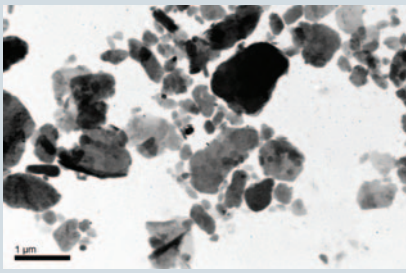
The mPrep™ System saves you effort while protecting and keeping track of valuable samples. The system features two types of purpose-built, microliter-volume capsules – one for specimens, the other for grids. Capsules attach to standard pipettors, which are used to conveniently deliver reagents in measured amounts.

Users get consistent sample preparation with almost no direct handling of specimens and grids. Once the tissue or grid is in its own, labeled capsule, you don't have to touch it again during processing. It is safe, easy-to-handle and clearly labeled. The small, enclosed capsule, reduces reagent consumption. The system adapts to any protocol for biospecimen preparation, grid staining or immuno-labeling. Multi-channel pipettors enable users to increase throughput, with virtually no extra effort.

Applications: TEM



Kidney (TEM)



Nanoparticles (TEM negative stain)

- **As few as two human touches from microtome to microscope – reduces damage and loss**
- **Grids and capsules labeled for easy tracking from start to storage**
- **Capsules attach to common lab pipettors for controlled reagent timing and minimal reagent consumption**
- **Parallel processing**

mPrep™ System for Specimen Preparation and Grid Staining

Consistent sample preparation with almost no direct handling of specimens and grids

mPrep/s™ Specimen Processing Capsules

Capsule

Screen

mPrep/s™ capsules allow users to fix, dehydrate and embed specimens in a single vessel. They can be used in two ways. The first method is to entrap specimens in the bottom of the capsule using the removable, adjustable screen with the hand-held Insertion Tool (**85010-03**). The second method is to flex the screen open using the mPrep/s™ Workstation* (**85010-06**). With the screen opened, the user places a specimen in the screen and orients it to the desired position within the capsule. Once the screen closes on the specimen, it is held in place throughout fixation, embedding, and sectioning. No additional embedding molds are required, and the capsule itself easily fits in the microtome chuck. This capsule is highly recommended for transmission and scanning electron microscopy, but can also be used for any sample preparation.

mPrep/s™ capsules are available in 24/packs or bulk. The hand-held Insertion Tool (**85010-03**), the Workstation* (**85010-06**), and additional recommended accessories for use with the mPrep/s™ capsule are located below.

* The Workstation is required to make use of the orientation feature of the mPrep/s™ screen.

Insertion Tool

Cat. No.	Description	Qty.
85010-01	mPrep/s™ Capsules with screens	24/pk
85010-02	mPrep/s™ Capsules with screens	96/pk
85010-03	mPrep/s™ Insertion Tool	each

mPrep/g™ Grid Processing Capsules

Each capsule can hold one or two TEM grids securely for staining, immuno-labeling and labeled storage. Grids are protected from loss, misidentification, and damage. Grid-tite™ slots keep grids safe even if an open capsule is dropped.

Grids require handling only twice: when inserted into capsules and when placed in the TEM.

Using a multi-channel pipettor, processing up to 24 grids simultaneously takes no more effort than a single grid. Reagent consumption is as little as 20µl per grid. The chance of grid damage or loss is greatly reduced using these capsules. See mPrep/g™ Pipettor Kits (**85010-07** and **85010-08**) and additional accessories below.

Cat. No.	Description	Qty.
85010-04	mPrep/g™ Capsules	16/pk
85010-05	mPrep/g™ Capsules	96/pk

mPrep/s™ WorkStation for TEM and SEM

Everything you need to work efficiently while preparing your samples using mPrep/s™ capsules is easily accomplished with the mPrep/s™ WorkStation. Simply load the capsule onto the built-in insertion tool at the center of the workstation, detach the screen from the capsule, use the lever to open the screen and insert the specimen. Then release the lever and re-attach the capsule. Once loaded, the sample requires no additional handling – even for TEM embedding or SEM mounting.

The mPrep/s™ Workstation's polyethylene surface minimizes dulling of dissection tools and is fully immersible for easy cleaning between uses. Molded into the surface are 12 dissection wells to organize your specimens and keep them wet if desired. At the back, 12 capsule wells and 3 screen holders conveniently hold these prior to use. On either side of the workstation, a total of 24 capsule wells can hold loaded capsules and keep them wet while loading into the channels of the pipettor. Single and multichannel pipettor kits are sold separately. Additional recommended accessories for use with the mPrep/s™ Workstation are shown below.

Features

- Specimens may be oriented using several methods
- Streamlines specimen processing from dissection to reagent processing
- Once loaded in capsules, specimens are not touched again – even for TEM embedding or SEM mounting
- Dissect and load specimens wetted by buffers or fixatives
- Directly load capsules onto pipettor from Workstation

Applications

- Capsule-based Processing of Biological Tissue for TEM
- Biological tissues – fix and critical point dry (CPD)
- Bio tissue cryo-facing
- Polymer cross-section preparations

mPrep Filter-Couplers

Filter couplers prevent the introduction of damaging reagents into pipettors. They also improve the fit of mPrep/g™ capsules on some pipettors. Pack includes 16 filter couplers and a capsule storage box.

Available in two pore sizes:

1. Standard mPrep/f30™: nominal 30 µm pore size filter appropriate for most applications.
2. Extreme mPrep/f13™: nominal 13 µm pore size filter for use with biohazards and very aggressive reagents.

mPrep™ Tousimis® Capsule Holder

Holds up to 6 mPrep/s™ or mPrep/g™ capsules in Tousimis® CPD apparatus

85010-13

mPrep™/Bench

96-well silicone rack provides tight seal to capsule bottoms during incubations or transfer of fluid-filled capsules to ovens and incubators. Autoclavable.

85010-16

Reagent Reservoirs

Chemically resistant 25ml reservoirs, 50 per pack, HDPE

85010-14

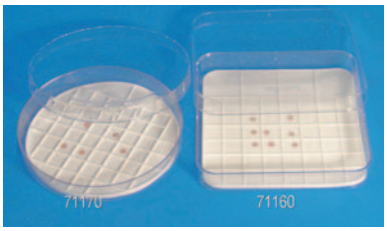
GRID PREPARATION SUPPLIES AND ACCESSORIES

Grid Staining & Mounting (continued)

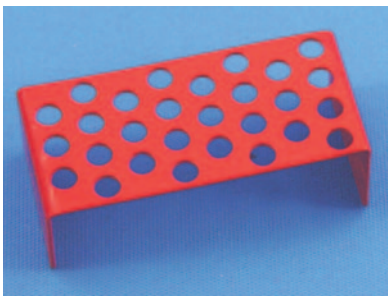
Grid Mats

White silicone rubber mats, with numbered compartments. Good for organizing grids. They will not slide or jump between compartments. Also ideal for staining grids. Easy to pick up grids without damaging forcep tips. Mats are available for square and round petri dishes, (100mm diameter, 115mm high).



Cat. No.	Description	Qty.
71160	Square Grid Mat	each
71162	Square Grid Mat	1 dozen
71170	Round Grid Mat	each
71172	Round Grid Mat	1 dozen

EMS Domino Rack



The EMS Domino rack is "U" shaped and made from an aircraft alloy sheetstock with serial perforations; thermally bonded spaceage copolymer; 5mm diameter holes, 28 holes per rack. The formvar film cast on the rack will stretch across a series of smooth edged holes forming a flat, wrinkle free film that is ready for grid mounting. The Domino Rack allows the sections within the slot to dry flat and wrinkle free; it reduces the film and section contamination to negligible levels. The size of the rack is 54mm (L) x 17.5mm(H) x 25.5mm (W) Moran, D.T., and Rowley, J.C., (1987). "Biological Specimen Preparation for Correlative Light and Electron Microscopy in Biology: Microscopy and Methods, ed. M.A. Hayat. Academic Press, New York./ pg 1-22

70620	EMS Domino Rack	each
70621	EMS Domino Rack	10/lot

Grid Staining Matrix System

This unique staining device allows you to stain up to 25 grids at one time or as little as one The Matrix system has a simply alpha-numeric identification system. The unit is not solvent or chemically resistant to acids so all stains should be aqueous based only.

The system requires very little stain and you may use different vessels for each stain. The amount of volume of stain required is as follows:

21–25 grids: 11ml **16–20 grids:** 9ml **11–15 grids:** 7ml **06–10 grids:** 5ml **01–05 grids:** 3ml

Each system includes: Matrix Body, 2 each of the Staining Vessels, (Red and Blue)

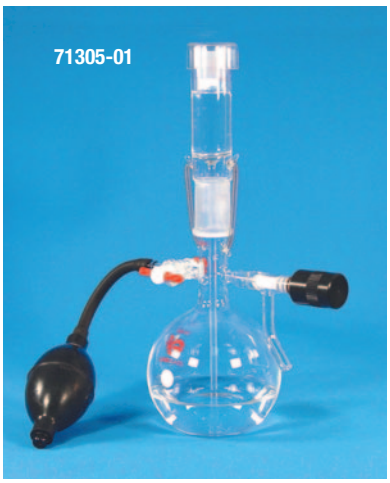
Cat. No.	Description	Qty.
71179-01	Grid Staining Matrix System Kit	each
71179-05	Matrix Body with handle and cover	each
71179-06	Staining Vessels, 1 red and 1 blue	2/pk
71179-07	Staining Vessel, blue	each
71179-08	Staining Vessel, red	each

Film Casting Device

EMS EXCLUSIVE

An all glass apparatus. It casts uniformly thin films of parlodion, formvar, or butvar directly onto 1x3 microscope slides. The film casting solution can be used repeatedly. A built-in fine-pressure-release valve helps control the speed of drainage. The thickness of the film is controlled by the concentration of the film solution and the rate of the drainage. The unit requires 100mls of film casting solution to start.

The unit comes complete with: 500 ml capacity flask with built-in valves; Air-in and Air-out, Film casting Cylinder with Cover, and 75 cc Atomizer.



Cat. No.	Description	Qty.
71305-01	Complete Film Casting Device	each

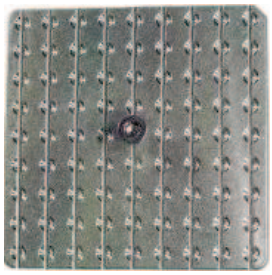
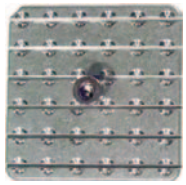
EMS Grid Prep Holders



Electron Microscopy Sciences introduces unique preparation trays which may be used for staining and/or placing an evaporator for the coating of grids.

The trays have a M4 tapped hole in the center which allows for insertion of pin mount. They also have a screw pin in the middle that may be used as a handle for manipulating the trays.



They are made from medical grade aluminum and come in a plastic storage box.

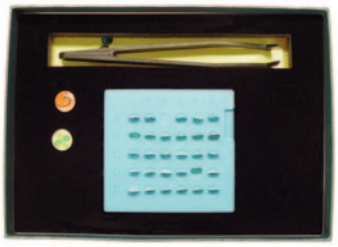
Available in two sizes:

36 capacity: measures 1.688" (L) x 1.688" (W) x 0.250" Thick (43 mm x 43 mm x 6 mm)

81 capacity: measures 2.563" (L) x 2.563" (W) x 0.250" Thick (65 mm x 65 mm x 6 mm)

Cat. No.	Description	Qty.
71175-01	EMS Grid Prep Holder, 36 Capacity	each
71175-02	EMS Grid Prep Holder, 81 Capacity	each

Grids Staining Pad

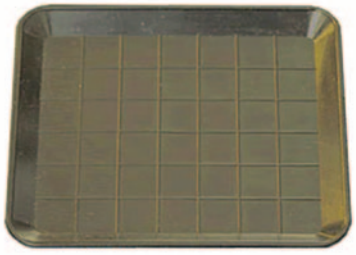


Observing the ultrastructure of cells under an electron microscope is an important aspect of biological research, especially in the neurosciences.

Unfortunately, preparing a sample for a transmission electron microscope is a long and difficult process. This product was designed to simplify the preparation of samples and make the process more time efficient.

Cat. No.	Description	Qty.
71187	Grids Staining Pad	kit

Picking Trays



These unique trays, which are available in either black rigid ABS plastic or aluminum in black or tan.

The trays feature 42 cells with a lip differentiating each cell. The cells measure 11 mm x 11 mm (7/16 x 7/16").

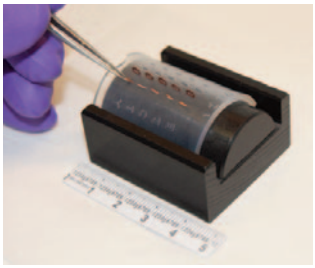
Tray measures 96 x 34 mm (3.78 x 1.34").

Trays perfect for placement of grids and storage of small components.

Cat. No.	Description	Qty.
71171-01	Picking Tray, Black ABS Plastic	each
71171-02	Picking Tray, Black Metal	each
71171-03	Picking Tray, Tan Metal	each

Modified Hiraoka Staining Kit

EMS is proud to introduce a modified Hiraoka Staining Kit that can stain up to 20 grids at a time. This kit encompasses all of the amazing qualities of the original Hiraoka Staining Kit with the enhanced features of the ability to autoclave and microwave the staining tray as well as the staining tray insert. The modified plate holder as well as the parafilm well holder are made from Delrin, while the staining tray and staining tray insert are made from polypropylene. (Chemically resistant, autoclavable, and microwave safe.)



Kit includes: Modified Hiraoka Staining Tray (6), Modified Plate Holder, Parafilm Well Holder, Staining Tray Space Insert (2), Grid Support Plate (2), Parafilm.

Dimensions of kit contents are as follows:

Modified Staining Tray: 46 x 46 x 11.5mm (1¾ x 1¾ x ½") thick
Modified Plate Holder: 45 x 38 x 32mm (1¾ x 1½ x 7/32") thick
Parafilm Well Mold: 53 x 40 x 17.5mm (2⅛ x 1½ x ¾") thick
Staining Tray Space Insert: 29 x 14 x 4.5mm (1½ x ⅝ x 5/32") thick

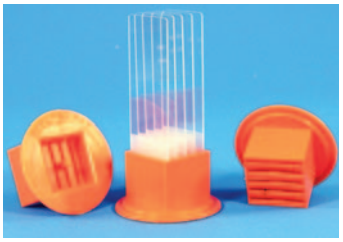
GRID PREPARATION SUPPLIES AND ACCESSORIES

Grid Staining & Mounting (continued)

Five-Slide Gripper



- The Five-Slide Gripper accommodates five microscope slides in one staining procedure.
- Fits most coplin and round-open staining jars.
- No need to remove slides for drying.
- Made from a special material which is resistant to all chemicals and solvents which are used in staining.
- Withstands drying temperatures up to 80°C

Cat. No.	Description	Qty.
71410-06	Five-Slide Gripper	6/pk

Plexiglas Microscope Slides

These plexiglass slides are 3 x 1" (75-25mm) and 1 mm thick. They prevent wrinkling and section loss while mounting sections on grids. The procedure is simple. ***See our Technical Tip on page 15.***

Cat. No.	Description	Qty.
71891-10	Plexiglass Microscope Slides	5/pk

Grid Coating Pen For TEM; Coat Quick "G"

The Coat-Quick "G" pen improves the adherance of tissue sections onto the grids. With a touch of the pen to the grid, a thin layer of coating is applied to the grid. Drying takes place in approximately 1-2 minutes at room temperature. After it has dried the grid is ready for tissue mounting. The pen is also used in pretreating grids prior to mounting supporting films such as formvar and carbon; it minimizes dislodging, widening, or breaking of the support film.

Cat. No.	Description	Qty.
70624	Grid Coating Pen	each

Grid-Stick Kit

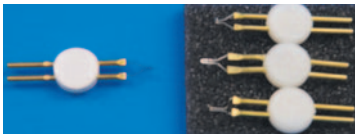
A helpful device for multi grid staining. If the instructions are followed carefully you can say good-bye to precipitate and dirt. The Grid Stick is made from a thin, but rigid alloy that does not react with commonly used organic solvents or stains. The stick itself measures 4mm wide, 75mm long and has a slot along its center with small undercut notches on one side to make grid removal simple. A small area on the top of each stick is reserved for identification.

The Grid Stick is coated with a specially-formulated pressure-sensitive adhesive. This adhesive is resistant to solvents used in conventional staining methods (e.g., water, alcohol, ethanol) and aggressively holds the grids in place during staining, emulsion coating, carbon coating, shadow casting, serial section collection, etc., yet will not remain on the grid once it is removed from the stick. During staining the grids are held in the same plane as the solution flow, minimizing the risk of breaking the formvar film and, or collecting surface debris. Grids may be stored, handled, and examined with minimal effort. For example, if your grids are on SynapTek Grid Sticks you can simply place the stick on the stage of a phase microscope, identify the material (you will see outlines of large cells), and determine its condition (i.e., holes in material, dirt on grids) in only a few seconds without disturbing a single grid. In short, you will find that the SynapTek Grid Stick is simple, easy to use, and most importantly, highly reliable.

SynapTek Grid-Stick consists of:

- 5 coated Grid Sticks
- 10 Staining Pipettes (modified)
- 2 flow-limiting Plugs and Bulbs
- Instructions

Cat. No.	Description	Qty.
71175	Grid-Stick Kit	each
Replacement Components:		
71176	Grid-Stick, uncoated	10/pk
71177	Staining Pipettes with 2 plugs	20/pk
71178	Grid-Stick Glue (For recoating GridStick)	5ml



Hot Pen – Wax Pen; A Tool for Separating Sections or Cauterizing

Powered by AA batteries. This pen helps to flatten and separate tissue sections and reduces compression in thin sections. Available in two models: Wax Pen 1 is powered by one AA battery; Wax Pen 2 is powered by two AA batteries. Both pens are using the same tip. Replacement tip (Cat. #72679-RT) is a straight one. Replacement tip (Cat. #72679-03) is a set of three different configurations: Straight, Hook, and 'U' Shaped Tips.

Cat #	Description	Length with Tip w/o Cap	w/Cap	Diameter	Pack
72678	Wax Pen 1 (A)	6½"	6¾"	¾", 18mm	each
72679	Wax Pen 2 (B)	8¼"	8¾"	¾", 18mm	each
72679-RT	Replacement Tip				each
72679-03	Replacement Tips			Set of Three Variable Tips

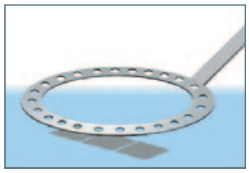
Grid Staining & Mounting (continued)

Perfect Loop

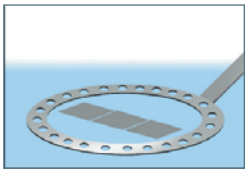
Using this PERFECT LOOP, you can place your thin sections, cut on the ultramicrotome, easily on the grid mesh without creases.

EMS EXCLUSIVE

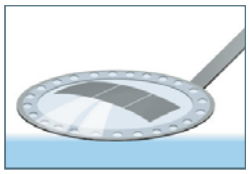
The Perfect Loop allows you to pick up sections consistently without causing any damage to the sections. It is the only loop that is currently available where the outside diameter of the loop is the same as the grid and the inside diameter is slightly larger than the observation area of the electron microscope. The thickness is about 40 microns. Due to the fact that the loop and the grid are of the same diameter they are attracted to one another when in water and attach together through the surface tension of the water. Even if the section touches the inside of the grid during blotting the touching area is minor and, therefore, the section is not damaged. When the grid is removed from the loop the section remains in place without fail. The area equals the observation field (about 2mm diameter) of the electron microscope; thus pieces can be fully observed.



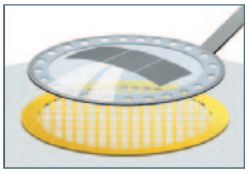
1. Center the LOOP above the sections



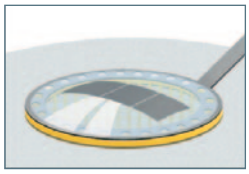
2. Slowly lower the LOOP over the sections and touch the water.



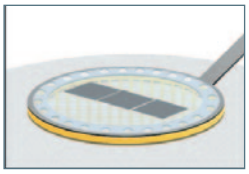
3. Gently lift up the LOOP with the sections in a droplet of water



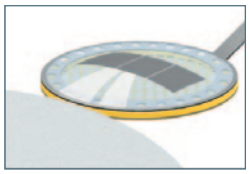
4. Lower the LOOP onto a grid and lift up again.



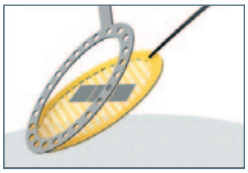
5. The grid holds to the LOOP by surface tension.



6. Lower the LOOP to the filter paper to remove water.



7. For coated grids, touch with filter paper to remove water.



8. Separate the grid from the LOOP with an eyelash.

Perfect Loop for Ultra thin sections

Cat. No.	Description	Qty.
70944	Set of Handle & Loop	set
70945	Loop only	each
70946	Loop only	5/each

71561-06	3-Well Slide, Porcelain	6/pk

White Porcelain Plate

12 cavities on a white porcelain plate. Used for staining and color reactions. They measure: 4⅝"(L)x3½"(W) (118x90mm). Cavity depth: ¼" (6.4mm).

Cat. No.	Description	Qty.
71562-01	White Porcelain Plate	each
71562-06	White Porcelain Plate	6/pk

Glazed Porcelain Plate

Our economical glazed porcelain plate is made from high purity raw material, uniform in quality and resistant to acids and alkalis. It can withstand sudden temperature changes without cracks, explosion or deformation. Under normal conditions, the glazed plate can sustain a temperature of up to 1050˚ C.

Available in two models:

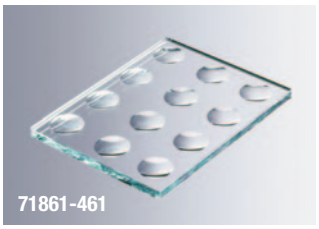
1. 6 well with overall measurements of 3¼"(L) x 2⅛"(W) x ⅜" thick, and

2. 12 wells with overall measurements of 4½" (L) x 3½" (W) x ½" thick.

Cat. No.	Description	Well Measures	Qty.
71575-06	6-Well	20mm Dia x 5mm Deep	each
71575-12	12-Well	20mm Dia x 5mm Deep	each

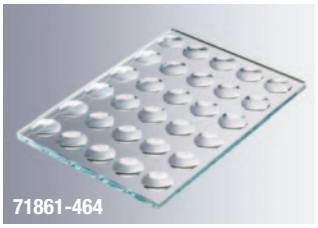
Marienfeld Superior™ Staining Plates

- **Made of float glass**
- **With bevelled edges**
- **With clipped corners**
- **With ground and polished cavities**



Cavities: approx. 20 to 22 mm diameter, approx. 2 mm depth

Cat No.	Cavities	Dimensions	Qty.
71861-460	6	130 x 100 x 6 mm	each
71861-461	12	130 x 100 x 6 mm	each
71861-462	24	130 x 160 x 6 mm	each



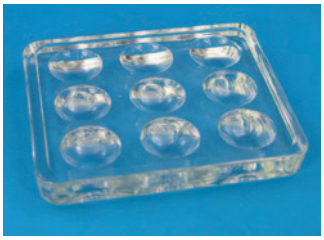
Cavities: approx. 24 mm diameter, approx. 3 mm depth

Cat No.	Cavities	Dimensions	Qty.
71861-463	24	130 x 200 x 6 mm	each
71861-464	30	130 x 200 x 6 mm	each

Matte surface, cavities: approx. 16 mm diameter, approx. 1.5 mm depth

Cat No.	Cavities	Dimensions	Qty.
71861-465	12	76 x 60 x 4 mm	5/pk

Pyrex® Plate



A 9 cavity Pyrex pressed plate which offers a clear view for observation by transmitted light. The plate measures: 4"(L)x3⅜"(W) (100x85mm). The cavity is ¼" (6.4mm) deep with a ⅞" (22mm) opening.

Cat. No.	Description	Qty.
71563-01	Pyrex Plate	each
71563-06	Pyrex Plate	6/pk

3-Cavities Spot Plates, LDPE

These spot plates have three depressions 21mm diameter x 7mm deep. The tray is 28mm x 85mm. Made from low density polyethylene and will withstand temperatures up to 80˚ C.

Cat. No.	Description	Qty.
71574-05	3-Cavities Spot Plate, Polypropylene	5/pk
71574-40	3-Cavities Spot Plate, Polypropylene	40/cs

GRID PREPARATION SUPPLIES AND ACCESSORIES

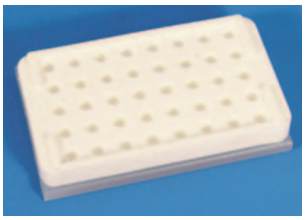
Grid Staining & Mounting (continued)

12 Cavities Spot Plate, Polypropylene

Very similar to the white porcelain plate, this PP plate comprises 12 cavities of approximately 1ml capacity and is economically priced. This plate is very high quality, unbreakable as well as autoclavable.

Cat. No.	Description	Qty.
71572-01	12-Cavities Spot Plate, Polypropylene	each
71572-10	12-Cavities Spot Plate, Polypropylene	10/cs

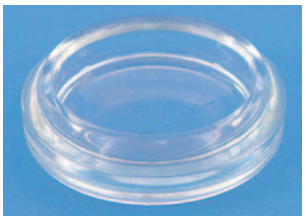
Silicone Staining Pad



Made from white silicone, a non-reactive material. Pad has 40 cells in 5 rows of 8 each. Each cell is half-sphere shaped with an opening of 6mm dia. and 5mm deep. A few drops of staining solution is added to the wells and grids are then immersed and retrieved as per staining procedure. A watch-glass plate comes with each dish to reduce oxygen and evaporation. Measures: 5"(L)x3"(W)x ½"(T) (127x76x13mm)

Cat. No.	Description	Qty.
71565	Silicone Staining Pad	each

Syracuse Watch Glass

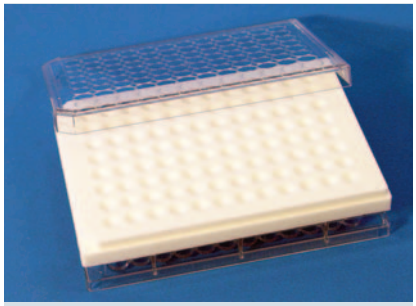


A clear watch glass which measures 65mm (OD) x 50mm (ID) x 10mm (Deep). The glass is grooved and has a recessed bottom which allows for stacking and prevents scratching. It is ideal for staining and specimen preparation.

Cat. No.	Description	Qty.
71570-01	Syracuse Watch Glass	each
71570-06	Syracuse Watch Glass	6/pk

An EMS Exclusive...

The EMS Staining Plate



Silicone offers two advantages:

- **Resistant to all chemicals and solvents**
- **During manipulation of the grids in the well there is no risk of damaging the fine points of the tweezer.**

The EMS Staining Plate for Electron Microscopy was developed by Dr. Miguel Berrios, at SUNY at Stony Brook, Dept of Pharmacological Sciences, School of Medicine, New York.

The chemical etching process, antibody incubations and final staining with heavy metal salts of each grid is performed in the small cone-shaped wells on the EMS staining plate.

The EMS Staining Plate for electron microscopy post-embedding staining and immunohistochemistry offers several advantages over all other commercially available staining devices. The base plate is a solid piece of chemical-resistant silicone 127.5mm long, 85.5mm wide, 11.5mm thick with 96 cone-shaped wells organized (like the microtitration plate) in parallel rows of eight, using the lid of a 96-well Falcon 3072 Microtest™ III Plate as a cover. The base has two notches to serve for orientation and a 1.5mm X 4.4mm deep lip where the cover rests. Each well is an inverted cone 7mm in diameter and 2mm deep. Grids either float or rest at the bottom of each well. The wells allow incubation of a grid in 12-60 microliters of solution without reagent loss due to adsorption or cross contamination, even when the plate is tilted up at 70°. Due to the shape of the well, the flat surface of the grids never come into contact with the walls of the well, both facilitating sample staining and grid recovery.

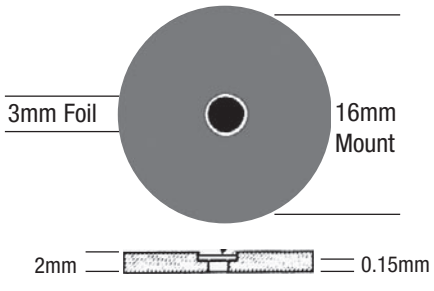
Reference: Berrios, Miguel; (1991), A Staining Plate For Electron Microscopy. 48: 90-92.

Cat. No.	Description	Qty.
71568	EMS Staining Plate	each

Pinholes

Copper Foil Pinholes

These pinholes are prepared from pure copper foil, 3mm in diameter, 25 microns thick. They possess very high roundness and edge retention. Blackened on one surface. Mounted in black anodized aluminum discs. Mounted in a recessed hole in an anodized holder, 16 mm in diameter.



Applications

- **Spatial filtering.**
- **Controlling the diameter of light beams**
- **Creating point light sources.**
- **Image analysis.**
- **Etc.**

Cat. No.	Description	Qty.
PH-C1	Pin Hole 0.001mm (1µm) dia.	each
PH-C2	Pin Hole 0.002mm (2µm) dia.	each
PH-C5	Pin Hole 0.005mm (5µm) dia.	each
PH-10	Pin Hole 0.01mm (10µm) dia.	each

101-500µm	+/- 2µm
25-100µm	+/- 1µm
1-25µm	+/- 0.5µm

GRID PREPARATION SUPPLIES AND ACCESSORIES

Vacuum Systems

Vacuum Pick Up System

Handle delicate miniature objects without scratching, breaking or pinching. The system avoids contamination of parts and performs functions that tweezers does such as sorting, picking up, holding, carrying, and transferring. As well it is an alter-native way for handling cover slips without the use of forceps.

- **Picks up grids faster and easier than tweezers – *WARNING: Never use this device on coated grids***
- **Quiet operation**
- **Eliminates all tweezer damage to grids**
- **Good suction (produces 14" Hg vacuum and an air flow of 125 cubic inches/minute); Can pick up aluminum stubs**
- **Can be used as a tool to pick up glass slides, cover slips, wafers, thin film samples, etc.**

Double-insulated (115-120V, 60Hz, 2-wire). Light weight, completely assembled and ready for immediate operation as soon as the proper tip is selected and installed. Vacuum is created at the tip by placing the finger over the control hole on the anodized aluminum vacuum pen. To break the vacuum, just remove your finger from the hole.

Vacuum Pick-up System includes:
Vacuum Pick-up System complete set: Vacuum Generator, Aluminum Vacuum Pen, Five Vacuum Tips, Set of seven Rubber Vacuum Cups (size ranging: 9/16", ½", 7/16", ⅜", 5/16", ¼" and 3/16"), an In-Line Filter, and 4 ft (122 cm) of Vacuum Tubing.

Cat. No.	Description	Qty.
71894	Vacuum Pick-Up System, 115V/60Hz	each
71895	Vacuum Pick-Up System, 220/60Hz	each
71896	Vacuum Generator 115V	each
71897	Vacuum Generator 220V	each
71894-01	Vacuum Pick-up Pen only	each
71904-02	Vacuum in-line-filter ⅜" x 1½"	each
Vacuum pick-up tips, Stainless steel, 1.5" long:		
71898	12 gauge, 0.109" (O.D.); 0.085" (I.D.)	each
71899	16 gauge, 0.065" (O.D.); 0.047" (I.D.)	each
71900	18 gauge, 0.050" (O.D.), 0.033" (I.D.)	each
71901	20 gauge, 0.035" (O.D.), 0.022" (I.D.)	each
71902	25 gauge, 0.020" (O.D.), 0.095" (I.D.)	each
71903	Vacuum suction cups 0.500" diameter	each
71904	Vacuum suction cups 0.250" diameter	each
71905	Vacuum suction cups 0.164" diameter	each
71906	5⁄16" (7.94mm) Vacuum Suction Cup	each
71907	¼" (6.35mm) Vacuum Suction Cup	each
71909	Set of 7 Rubber Cups (9/16", ½", 7/16", ⅜", 5/16", ¼", and 3/16")	7/set

Pen Vac™

Pen-Vac™ is a new improved way to handle small, flat surface objects. Pen-Vac is ideal for EM work. It can be used to handle grids, pick up stubs, align membranes, work with glass slides, cover slips and much more. Holds up to one minute.

- **Lifts up to 50 grams.**
- **Totally self-contained vacuum.**
- **Light-weight, less than 1oz.**
- **Fits in your pocket like a pen.**
- **Brushed aluminum body.**
- **Optional storage compartment for vacuum tips and cups.**
- **No power supply needed.**
- **Available in various sizes.**
- **Interchangeable vacuum probes.**

Pen-Vac™ comes with:

- **A variety of vacuum probes, with an attached vacuum cup and it is available with plastic or aluminum hubs. Straight and angled to suit your applications. The stainless steel needle portion of the probes are one-half inch long.**
- **We offer the Static Dissipative and Conductive Cups that provide ESD protection for electrostatic discharge of sensitive components. Cups comes in three sizes: ⅛" (3.17mm); ¼" (6.35mm); and ⅜" (9.52mm).**

Set consists of: One Pen with 6 Probes and Cups. (6 Probes: 3 angled, ⅛", ¼", ⅜" and 3 straight ⅛", ¼", ⅜")

71914	Complete Pen-Vac System	set
71915	Same as 71914 with Deluxe Case	set
Probes and Cups:		
71916	⅛" Straight and Bent, Small	2/pk
71917	¼" Straight and Bent, Medium	2/pk
71918	⅜" Straight and Bent, Large	2/pk

ESD Vacuum Tool

Battery-free, hand-held vacuum pick up pen designed for the safe pick-up of SMD components during assembly, test and rework processes. With fountain-pen dimensions, Vampire grabs, lifts and places components in complete safety, aided by a powerful internal piston and a full ESD protection.
A complete choice of tips designed for any size of SMD component helps the operator to have always the right tool in hand. Includes: pen, conductive metal straight needle, 45° angled metal needle, conductive rubber cup 4mm, conductive rubber cup 6mm, conductive rubber cup 9 mm, and lubricant kit.

Cat. No.	Description	Qty.
71927-01	ESD Vacuum Tool Kit, **includes:** vacuum pen, straight conductive metal needle, 45° angled conductive metal needle, conductive rubber cup 4mm, conductive rubber cup 6mm, conductive rubber cup 9mm	kit
71927-02	ESD Vacuum tool replacement set: **includes:** straight conductive metal needle, 45° angled conductive metal needle, conductive rubber cup 4mm, conductive rubber cup 6mm, conductive rubber cup 9mm	set
71927-03	ESD Vacuum tool replacement set: **includes:** conductive rubber cup 4mm, conductive rubber cup 6mm, conductive rubber cup 9mm	set

Cat. No.	Description	Qty.
71927-04	Spare ESD 4mm cups	each
71927-05	Spare ESD 6mm cups	each
71927-06	Spare ESD 9mm cups	each
71927-07	Straight needle, ESD 4mm cup	each
71927-08	Straight needle, ESD 6mm cup	each
71927-09	Straight needle, ESD 9mm cup	each
71927-10	45° angle needle, ESD 4mm cup	each
71927-11	45° angle needle, ESD 6mm cup	each
71927-12	45° angle needle, ESD 9mm cup	each

Porta-Wand®

The Porta-Wand kit comes with a non-removable 9.6V NiMH rechargeable battery and in-stand charger. Easy push-button on/off control. Replaceable internal air filter is accessible from the front of the tool. Internal exhaust filter ensures better than Class 1 performance. Indicator Light flashes when battery needs to be recharged, and also turn on when proper vacuum has been established.

Specifications:

Battery	Type: 9.6V NiMH, Rechargeable, Non-Removable Charge Time: 2 hrs.; Continuous Run Time: 2-3 hrs. Recharges: Up to 1000 Replacement: Factory Replaceable
Vacuum	15 to 20" of mercury (atmospheric pressure and elevation dependant)
Measurements	Wand: 7 x 1.2 x 0.85" (178 x 30 x 21mm) Stand: 4.5 x 2 x 3.5" (114 x 51 x 98mm)
Weight	Porta-Wand: 5.44 ounces (154 grams) Charger Stand: 10.5 ounces (298 grams) Transformer: 16 ounces (454 grams)
Operating Temp	10°C to 45°C
Charger Power Requirements	Supplied In-Stand Charger; Wall plug-in power supply 24 VDC @ 500ma. Barrel jack size 5.5mm OD x 2.1mm ID. Center pin positive.

Cat. No.	Description	Qty.
71928	Porta-Wand for up to 4" (100mm) wafers, with ESD-safe flat wafer tip and 115V In-stand Charger	each
71928-01	Porta-Wand for up to 6" (150mm) wafers, with ESD-safe flat wafer tip and 115V In-stand Charger	each
71928-02	Porta-Wand for up to 8" (200mm) wafers, with ESD-safe flat wafer tip and 115V In-stand Charger	each
71928-03	Porta-Wand for up to 12" (300mm) wafers, with ESD-safe flat wafer tip and 115V In-stand Charger	each
Porta-Wand with hard anodized wafer tip		
71928-04	Porta-Wand for up to 6" (150mm) wafers, with hard anodized wafer tip and 115V In-stand Charger	each
71928-05	Porta-Wand Air Intake Filters	5/pk

Porta-Vac®

The Porta-Wand kit comes with a non-removable 9.6V NiMH rechargeable battery and in-stand charger. Easy push-button on/off control. Replaceable internal air filter is accessible from the front of the tool. Internal exhaust filter ensures better than Class 1 performance. Indicator Light flashes when battery needs to be recharged, and also turn on when proper vacuum has been established.

Specifications:

Battery	Type: 9.6V NiMH, Continuous Run Time: 3-4 hrs. Type: 9V Alkaline, Continuous Run Time: 12-15 hrs. Type: 9V Carbon, Continuous Run Time: 4-5 hrs. Type: 9V Lithium, Continuous Run Time: 36-40 hrs.
Vacuum	15 to 20" of mercury (atmospheric pressure and elevation dependant)
Measurements	Wand: 7.3 x 1.1 x 0.80" (185 x 28 x 20mm) With Rechargeable Battery: 7.92 x 1.1 x 0.80" (200.23 x 28 x 20mm)
Weight	With Battery: 6.03 ounces (171 grams)

Cat. No.	Description	Qty.
71929	Porta-Vac II for up to 4" (100mm) wafers, with Molded PEEK wafer tip and 9V Disposable Battery	each
71929-01	Porta-Vac II for up to 6" (150mm) wafers, with Molded PEEK wafer tip and 9V Disposable Battery	each
71929-02	Porta-Vac II for up to 8" (200mm) wafers, with Molded PEEK wafer tip and 9V Disposable Battery	each
71929-03	Porta-Vac II 115V In-stand Charger and 9.6V Rechargeable NiMH Battery	each
71929-04	9.6V Rechargeable NiMH Battery	each
71929-05	Porta-Vac II Air Intake Filters	5/pk

GRID PREPARATION SUPPLIES AND ACCESSORIES

Vacuum Systems (continued)

ExP Vacuum Wand Kit

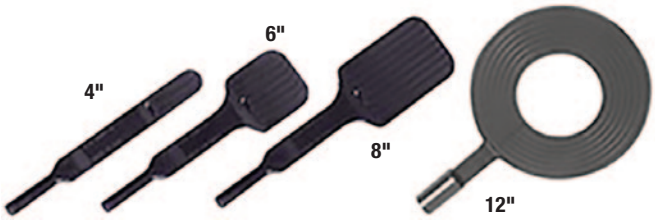
ExP Vacuum Wand Kits are a lower cost alternative to the Porta-Wand and Porta-Vac II systems, which share the same tips. Has a push-button to close the vacuum and release the wafer. The included stand keeps the button pressed when the wand is not in use. Comes complete with an 1/8" Inner Diameter coiled vacuum hose and a wafer tip. Must use a vacuum pump or vacuum line. Able to be used with our Vacuum Pick Up System.

71932-05

Cat. No.	Description	Qty.
71932	ExP Vacuum Wand Kit for up to 4" (100mm) wafers, with Molded PEEK wafer tip, 1/8" coiled hose and stand	each
71932-01	ExP Vacuum Wand Kit for up to 6" (150mm) wafers, with Molded PEEK wafer tip, 1/8" coiled hose and stand	each
71932-02	ExP Vacuum Wand Kit for up to 8" (200mm) wafers, with Molded PEEK wafer tip, 1/8" coiled hose and stand	each
71932-03	ExP Vacuum Wand Kit for up to 12" (300mm) wafers, with Molded Flat wafer tip, 1/8" coiled hose and stand	each
71932-04	ExP Push Button Wand for 1/8" coiled hose	each
71932-05	Push Button Wand Holder	each

Molded PEEK ESD-Safe Wafer Tips

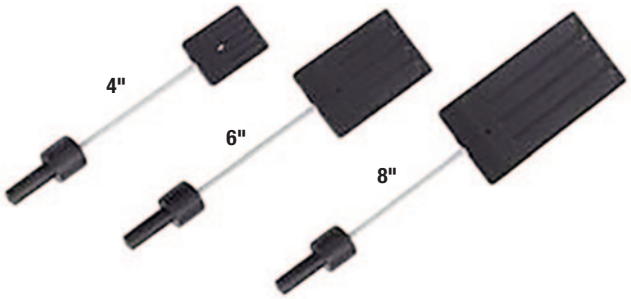
Made from PEEK, a high performance plastic and are able to be used in Porta-Wand, Porta-Vac II, and EMS Vacuum Wand Kits. Withstand temperatures up to 100°C. Thin profile to allow easy access to wafers.



Cat. No.	Description	Qty.
71935	Molded PEEK Wafer Tip for 4" (100mm) wafers	each
71935-01	Molded PEEK Wafer Tip for 6" (150mm) wafers	each
71935-02	Molded PEEK Wafer Tip for 8" (200mm) wafers	each
71935-03	Molded Flat Wafer Tip for 12" (300mm) wafers	each

Hard Anodized Wafer Tips

Made from hard anodized aluminum, these wafer tips are able to be used in the Porta-Wand, Porta-Vac II and EMS Vacuum Wand Kits. Withstand high temperatures up to 250°C. They feature a 3" long, straight stainless steel tube covered by a PTFE sleeve. The press-fit adapter is made from static dissapative plastic.



Cat. No.	Description	Qty.
71936	Hard Anodized Wafer Tip for 4" (100mm) wafers	each
71936-01	Hard Anodized Wafer Tip for 6" (150mm) wafers	each
71936-02	Hard Anodized Wafer Tip for 8" (200mm) wafers	each

Handi-Vac® Vacuum Cup

The Handi-Vac®-2 has an improved tip designed for better lifting capacity utilizing larger, non-marking vacuum cups. This new tip also enhances functionality and improves accuracy when picking and placing parts. It can be purchased with one static-dissipative cup available in three sizes: 3/8", 1/2" and 5/8". The entire vacuum tool is ESD-safe.

Cat. No.	Description	Qty.
71921-01	Handi-Vac-2, 3/8" (9.53mm) Vacuum Cup	each
71921-02	Handi-Vac-2 With 1/2" (12.7mm) Vacuum Cup	each
71921-03	Handi-Vac-2 With 5/8" (15.88mm) Vacuum Cup	each

Handi-Vac® Squeeze Bulb Kit

The Handi-Vac® Squeeze Bulb Kit is a versatile, cost-effective vacuum tool system that should be on every tool-bench.

Features:

(1) 1/8" vacuum cup on bent probe
(1) 1/4" vacuum cup on bent probe
(1) 1/8" vacuum cup on straight probe
(1) 3/8" vacuum cup on straight probe

Applications

SMT parts • Metal parts • Plastic parts • Smooth, nonporous-surfaces

This tool can be used with larger rubber vacuum cups ranging in size from 3/32" (2.38mm) to 3/4" (19.05mm) in diameter. Use the larger cups to pick up larger and heavier parts by placing them directly on the Handi-Vac tip without using a probe.

Cat. No.	Description	Qty.
71921-25	Handi-Vac® Squeeze Bulb Kit, includes: (1) 1/8" vacuum cup on bent probe (1) 1/4" vacuum cup on bent probe (1) 1/8" vacuum cup on straight probe (1) 3/8" vacuum cup on straight probe	each

ELECTRON MICROSCOPY SCIENCES...

your source for the latest, the best, the most advanced NEW PRODUCTS

Please visit our website to view or download our ***NEW PRODUCT FOCUS*** Catalog, featuring all these products and dozens more.

Diamond® SureFlow™ Bottle Top Dispensers

Precise and easy dispensing of laboratory reagents with an ergonomic design.

DYMO-Compatible Cryogenic Labels

Including CryoSTUCK® Thermal Transfer Labels and Freezer-DTermo™ Deep Freeze Labels.

EMS CryoDefender Forceps

An EMS Exclusive. These unique forceps allow you to work for extended periods in a liquid nitrogen environment.

Em1 Portable Microscope

x400 x600 x1000

A new and exciting benchmark in the world of microscopy. Used world-wide in labs as well as the world's most challenging environments.

CellCeps+ Heated For-ceps

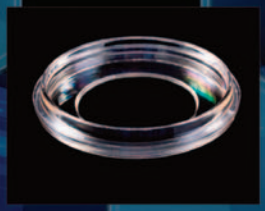
For orientation and positioning of histological specimens during embedding in paraffin wax.

Vortex™ Biopsy Cassettes

Small and Micro size. Biopsy Paper as well!

PEN Foil Bottom Sterile Dishes

Ideal for laser microdissection.



EMS has it!
